Monthly Performance Dashboard

March 2026

Natural Hazards Commission
Toka Tū Ake

Our dashboard explained

Our monthly performance dashboard ('dashboard') provides a monthly snapshot on operational performance across NHC Toka Tū Ake. This includes reporting on progress against our proposed performance targets for the year 1 July 2025 to 30 June 2026 as set out in our *Statement of Performance Expectations 2025/26*.

The following provides an outline of the sections of our dashboard and a brief explanation of each section.

Section 01 - Progressing our Statement of Performance Expectations (SoPE) measures

The *Statement of Performance Expectations 2025/26* ('SoPE') is one of our formal public accountability documents. It sets out our performance targets and forecast financial information.

Statement of Performance Expectations 2025/26

This section reports progress across those SoPE measures that can be measured on a monthly or quarterly basis. The results are cumulative year-to-date results. Results for SoPE measures that are tied to an annual year-end result or a binary result will be published in our June 2026 dashboard or reported earlier when the result is confirmed.

Section 02 - **Output 1** | Resilience

Resilience is output one of our SoPE. The vision for our Resilience Strategy 2024-29 is that natural hazards resilience becomes embedded in all aspects of decision-making for our homes, communities, towns and cities.

This section provides a quarterly update on the activities we are undertaking to give effect to our Resilience Strategy. The activities undertaken fall under the two strands of the strategy: 'Building knowledge, data and insights on natural hazard impacts and ways to reduce them'; and 'enabling, influencing and advocating for natural hazards resilience'.

Output 2 | Readiness (SoPE measure results only, reported under Section 01)

Readiness is output two of our SoPE. Readiness focuses on ensuring our capacity and readiness for an event, including prioritising the needs of vulnerable homeowners. Reporting on how well we are progressing this year's SoPE measures to maintain this focus can be found in this section (refer to measures 2.1-4).

Output 3 | Risk financing (SoPE measure results only, reported under Section 01)

Risk financing is output three of our SoPE. Our risk financing objective is for homeowners to have an accessible, sustainable way to help manage financial impacts of natural hazard events. This output supports our core legislative functions to contribute to the management of the financial risk to the Crown of providing natural hazards cover. Reporting on how well we are progressing this year's SoPE measures for this output can be found under *Section 1 - Statement of Performance Expectations (SoPE) measures - monthly monitoring* (refer to Output three - risk financing).

Section 03 - **Output 4** | Recovery

Recovery is output four of our SoPE and focuses on the way claims are managed after an event. Our recovery objectives are for homeowners to have an accessible, sustainable way to help manage the financial impacts of natural hazard events by receiving settlements that support effective recovery from these events.

This section encompasses the two sub-output classes under Recovery, which are:

Recovery | Canterbury earthquake sequence claims

The first sub-output class reports on the progress of outstanding claims arising from the Canterbury Earthquake Sequence of 2010-11 ('Canterbury') including claims NHC Toka Tū Ake is managing on behalf of Southern Response. Reporting each month includes how many claims have been reopened; resolved; and how many remain open. We profile our remaining on hand claims by age, complexity, and reopen reason.

Within this sub-output class we report on our progress in delivering the Government's On-sold support package, which supports homeowners of On-sold over-cap properties in Canterbury to access financial help to have their homes repaired.

Recovery | Claims relating to natural hazard events (excl. Canterbury)

The second sub-output class reports on the progress of outstanding claims not related to the 2010-11 Canterbury earthquake sequence. We report each month on how many claims have been received; resolved; and how many remain open.

The second sub-section encompasses two distinct cohorts, which are:

Claims managed by our Natural Disaster Response Model (NDRM) insurers under the Natural Disaster Response Agreement (NDRA), which came into effect on 30 June 2021. The data in this section is organised by loss event type (earthquake, landslide, flood, storm damage or other). We also profile claims received in the financial year by exposure type (land, building, building & land, not yet defined). All information presented under this cohort is at aggregate/ industry level.

Historical claims managed directly by NHC Toka Tū Ake. Here, we report on the small number of claims directly managed by NHC Toka Tū Ake ie. historic claims that pre-date the NDRA.

Our dashboard explained (cont.)

Section 04 - Resolving alternative homeowner pathways

In this section we monitor the resolution of complaints made against NHC Toka Tū Ake and its NDRM insurers. Specifically we report on whether we are resolving complaints in a timely manner.

Insured persons can make a complaint when they are unhappy with:

- the outcome of their claim.
- the way they have been treated, for example if they feel the Code of Insured Persons' Rights has been breached.
- the way their claim has been managed.

This section also provides visibility on the uptake of other resolution avenues available to insured persons.

The Code is a requirement under the Natural Hazards Insurance (NHI) Act 2023 (NHI Act) and addresses the lessons learned from previous natural hazard events.

Section 05 - Coverage and engagement through media

This section monitors the volume and sentiment of NHC Toka Tū Ake media coverage and what's driving it and where it's being driven in terms of media channel. We report on the sentiment of coverage across key themes along with reporting on our social media profiles in terms of the growth of our Facebook and LinkedIn profiles and the content that's increasing our profiles.

Section 06 - Complying with the Official Information Act

This section monitors how well we're complying with meeting our responsibilities to respond to requests for information covered by the Official Information Act (OIA) 1982 and the Privacy Act 2020. Our reporting in this section includes the volume of information requests we've: received; completed; and have remaining on hand at the end of the month.

Our reporting categorises information requests into two types: those in which our customers request information and/or supportive information from us on their claim (Customer OIA); and OIA requests that relate directly to NHC Toka Tū Ake and/or operational activities (Organisational OIAs). Reporting on our compliance rate for both information request types is monitored and reported here.

In this section we also provide visibility on the number of formal notices received from the Ombudsman of investigation into a complaint received. This reporting also includes any final opinions reached by the Ombudsman.

We also report here on the volume of requests received to draft a response for the Minister's Office.

Lastly, we report on the performance of our Contact Centre. Our reporting focuses on how well we're performing in servicing our two key communication channels - phone calls and email.

Section 07 - Data protection

This section monitors how well we're protecting the data that we hold. In particular, we report on privacy breach volumes each month as well as the severity and nature of those breaches. We also report on any emerging themes.

Section 08 - Our people

This section monitors a number of organisational performance markers including: headcount - overlaid by claim population movement; avg. annual leave balance; avg. sick leave usage; and voluntary turnover. We compare our results to the corresponding Public Service average and provide visibility on what's influencing movement within these markers. This section also provides a broad profile of our workforce, across a number of dimensions.

Section 1 - Statement of Performance Expectations (SoPE) measures - monthly monitoring

Output one: resilience

1. A resilience programme that informs, enables and influences for improved analysis and public understanding of natural hazards risk

Our strategic priority for resilience is to strengthen resilience by building knowledge and understanding of natural hazards risk to improve decision-making.

Our **resilience** objective is to equip decision-makers, homeowners and communities with better understanding of natural hazards risks so they can take action to reduce risk and strengthen resilience.

Output 1 | Performance measures

Ref	Measure	Target	YTD Result		Status Trend
1.1	Annual number of unique Natural Hazards Portal users, and percentage of daily active users seeking further information (via the PDF download function or Natural Hazard Portal-driven OIA requests)	80,000 users	67,744		On Track
		15% seek further information	39.9%		On Track
1.2	Number of downloads of our publicly available research and resilience documents	4,500	3,620		On Track
1.3	Number of formal submissions made on central and local government policy and plans	8 submissions	11		Achieved
	Percentage of recommendations within submissions that are partially or fully accepted or acted on	40% of recommendations accepted or acted on	82%		On Track
1.4	Percentage of homeowners surveyed who say they have acted on any of the six key preparedness actions promoted by NHC Toka Tū Ake	60%	62%		On Track
1.5	Progress on delivering our loss modelling strategy via agreed roadmap milestones:				
	Milestone: Evaluate PRUE (loss-modelling tool), now including earthquake fragility and vulnerability models, for applicability across different use cases and compare results with vendor models.	Achieved			On Track
	Milestone: Implement and evaluate Auckland Volcanic Field (AVF) models in PRUE.	Achieved			On Track
	Milestone: Engage with research community to ensure relevant research is identified, potential for loss modelling understood, and where appropriate planned for implementation into modelling.	Achieved			On Track

Section 1 - Statement of Performance Expectations measures - monthly monitoring

Output 1 | Performance measures - continued

Ref	Measure	Target	YTD Result		Status Trend
1.6	A research Benefits Management Framework is finalised and implemented, enabling the ability to track the short-, medium-, and long-term impacts and benefits of research:				
	Impact/benefit: Number of published research outputs resulting from research we fund, as part of achieving short-term research and innovation outcomes	60	55		On Track
	Impact/benefit: Number of postgraduate students supported as part of medium- to long-term capability building in natural hazards expertise	55	52		On Track
	Impact/benefit: Number of activities supporting the coordination of research and the research community, e.g. conferences and workshops, as part of knowledge transfer and coordination	10	8		On Track
	Impact/benefit: Number of research and resilience stories published externally, as part of achieving short-term dissemination and knowledge transfer to specialists and the public	60	48		On Track

Output two: readiness

2. Ensuring capacity and readiness for an event

This strategic priority focuses on continuously enhancing our readiness for natural hazard events, both weather and non-weather related.

Our **readiness** objective is to prepare NHC Toka Tū Ake and its partners to deliver the best possible claims management process for homeowners when a natural hazard event strikes. This means supporting homeowner and community recovery, by working with our insurer partners to deliver a transparent, timely, high-quality and responsive process for natural hazards insurance claims.

Output 2 | Performance measures

Ref	Measure	Target	YTD Result		Status Trend
2.1	Cumulative actions implemented from the North Island Weather Events Implementation Plan at the end of the financial year. There are 26 actions in total.	20 of 26 actions	18		On Track
2.2	NHC Toka Tū Ake is satisfied NDRM insurers have effective surge plans to support the NDRM to respond to a natural hazard event resulting in up to 100,000 homeowner claims under the natural hazards scheme	100%			On Track
2.3	NHC Toka Tū Ake tests the NDRM's preparedness for significant natural hazard events with natural hazard simulations	1 simulation		A Wellington earthquake simulation event is planned for 13 and 14 May 2026.	On Track

Section 1 - Statement of Performance Expectations measures - monthly monitoring

Output 2 | Performance measures - continued

Ref	Measure	Target	YTD Result		Status Trend
2.4	New Zealanders have increasing trust and confidence in NHC Toka Tū Ake	PSR Index ≥60	This annual measure is based on the annual Public Sector Reputation (PSR) Index Report. We will report our PSR Index score in our Jun-26 report.		

Output three: risk financing

3.1. Maintain a reinsurance programme that supports the delivery of accessible residential natural hazards insurance protection

The strategic priority for **risk financing** is to manage the fiscal risks of providing natural hazards insurance cover.

The risk financing output class supports our core legislative functions to contribute to managing the financial risk to the Crown of providing natural hazards cover by:

- managing the Natural Hazard Fund
- collecting levies payable for insurance under the NHI Act
- obtaining reinsurance and other risk transfer products.

Output 3.1 | Performance measures

Ref	Measure	Target	YTD Result		Status Trend
3.1.1	Reinsurance protection for 2026/27 is obtained on terms that assure continuity of coverage for all hazards under the NHI Act, at rates that are lower than the Crown's ceded cost of capital	1 June 2026	Pre-renewal engagement indicates continued market support, with programme placement on track and final terms to be confirmed by the Board.		On Track
3.1.2	An annual review of the risk financing strategy is completed	Achieved	Risk Financing strategy published January 2026 and updated Reinsurance Management Statement approved by Board February 2026.		On Track

3.2. Managing the Natural Hazard Fund (NHF)

Output 3.2 | Performance measures

Ref	Measure	Target	YTD Result		Status Trend
3.2.1	The percentage of levies collected compared to the annual budget	100%	99.3%	To date: FY2025/26 budget $689.4m, actual levies collected $684.5m (NHF Balance: $711.3m) 	→ 0% on Feb-26 EOM
3.2.2	The Natural Hazard Fund is managed according to parameters outlined in the Statement of Investment Policies and Objectives (SIPO)	Achieved	The Natural Hazards Fund is being managed in accordance with parameters outlined in the SIPO.		On Track

Section 1 - Statement of Performance Expectations measures - monthly monitoring

Output four: recovery

Our **recovery** objective is to have an accessible, cost-effective way to help homeowners manage the financial impact of natural hazard events through the insurance claims process.

Our recovery output class focuses on the way claims are managed after an event. From 1 July 2024 we are managing two insurance schemes:

- for events that occurred on or prior to 30 June 2024, EQCover applies.
- for events occurring on or after 1 July 2024, NHCover applies.

4.1. Settlement of the 2010-2011 Canterbury earthquake sequence claims

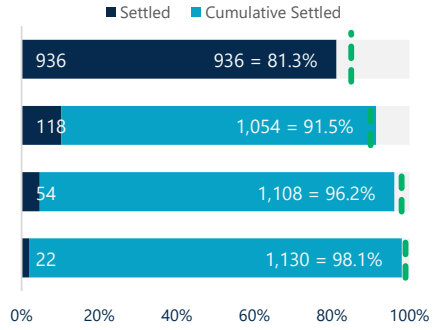
Output 4.1 focuses on the settlement of claims relating to 2010-2011 Canterbury earthquake sequence claims, while Output 4.2 focuses on the settlement of other natural hazard event claims.

Measures 4.1.3 and 4.1.4 have been amended to reflect the impact of timeframes introduced by the November 2024 policy changes to the Canterbury On-sold programme, and now better reflect our progress on completing the programme.

The measure relating to settling Southern Response claims has been updated to clarify that this measure focuses on settling claims within 12 months of the claims being confirmed as over cap.

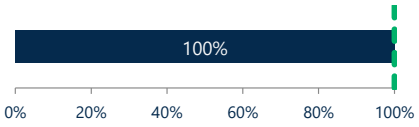
Output 4.1 | Performance measures | Timeliness

Ref	Measure	Target	YTD Result		Status Trend
4.1.1	Percentage of reopened claims settled from the date that they were reopened	85% within six months	81.3%	936 = 81.3%	→ 0% on Feb-26 EOM
		90% within 12 months	91.5%	1,054 = 91.5%	→ 0% on Feb-26 EOM
		98% within 18 months	96.2%	1,108 = 96.2%	↓ 0.1% on Feb-26 EOM
		99% within 24 months	98.1%	1,130 = 98.1%	→ 0% on Feb-26 EOM



Notes
The results seen in the above chart are cumulative. As at March EOM, there were 1,152 claims settled YTD in scope for this measure (i.e., n = 1,152). Twenty two claims have required more than 24 months to be settled.

Ref	Measure	Target	YTD Result		Status Trend
4.1.2	The On-sold ex gratia package is administered in accordance with the On-sold Canterbury Properties Services Agreement	Achieved	100%	100%	On Track



Measure	Standard	YTD Result
A decision on the outcome of the Application will be conveyed to the Applicant within one month of receiving all required documentation and reports.	100%	100%
NHC Toka Tū Ake will provide reporting to the Treasury as specified in Schedule 4 of the On-Sold Canterbury Properties Services Agreement.	Achieved	Achieved
Applications for ex gratia payments will be assessed against the criteria specified in the On-Sold Canterbury Properties Services Agreement and a decision on the outcome of the Application will be conveyed to the Applicant within one month of receiving all required documentation and reports.	100%	100%

Section 1 - Statement of Performance Expectations measures - monthly monitoring

Output four: recovery (cont.)

Output 4.1 | Performance measures | Timeliness

Ref	Measure	Target	YTD Result		Status Trend
4.1.3	The percentage of eligible On-sold applicants to receive a settlement offer	100%	99.6%		On Track

Notes

As at FY2024/25 close, 97.7% of eligible On-sold programme applicants had received a settlement offer. As at March 2026 EOM, this has risen to 99.6%, with only 8 applicants yet to receive an offer.

4.1.4	Percentage of eligible On-sold applications complete	80%	80.7%		On Track

Notes

As at FY2024/25 close, 71.5% of eligible On-sold programme applications had been completed, with homeowners back in a repaired home. As at March 2026 EOM, this has risen to 80.7%, with 273 applications remaining in progress.

4.1.5	Southern Response MOU claims are resolved within 12 months of the date they are confirmed as over cap	80%	77%		↑ 3.9% on Feb-26 EOM

Output 4.1 | Performance measures | Homeowner focus

Ref	Measure	Target	YTD Result		Status Trend
4.1.6	Surveyed homeowners are satisfied with their overall claims experience	≥60%	81%		↓ 0.8% on Feb-26 EOM
4.1.7	Complaints are resolved within 2 months or within a longer period as agreed by the homeowner and NHC Toka Tū Ake	95%	100%		On Track
4.1.8	NHC Toka Tū Ake settlements should be enduring: percentage of settled claims reopened within 6 months	≤5%	1.4%		On Track

Section 1 - Statement of Performance Expectations measures - monthly monitoring

Output four: recovery (cont.)

4.2. Claims relating to natural hazard events (excluding Canterbury)

Output 4.2 is focused on claims to the scheme that occurred after the 2010-2011 Canterbury earthquake sequence. These measures address the timeliness, quality and cost of claims resolution for all other events, including claims management services provided by our insurer partners under the operating model from 30 June 2021 onwards.

Individual measures relating to settling claims from the 2023 North Island Weather Events have been removed as over 99% of the claims have now been settled. Resolving remaining claims will be measured as part of 4.2.

Output 4.2 | Performance measures | Timeliness

Ref	Measure	Target	YTD Result		Status Trend
4.2.1	Percentage of claims settled from the date of claims lodgement	80% within 12 months	97.6%		↑ 0.2% on Feb-26 EOM
		95% within 24 months	99.0%		↑ 0.1% on Feb-26 EOM
		98% within 36 months	99.9%		↑ 0.05% on Feb-26 EOM
		99% within 48 months	100.0%		→ 0% on Feb-26 EOM

Notes

• The results seen in the above charts are cumulative, e.g., Total settled within 24 months is 1,990 (97.6% within 12 mths) + 27 (1.4% within 13-24 mths) = 2,017 (99.0%).

• As at March 2026 EOM, there were a total of 2,038 settled claims in scope for this measure (n = 2,038). One claim has required more than 48 months to be settled.

Section 1 - Statement of Performance Expectations measures - monthly monitoring

Output four: recovery (cont.)

Output 4.2 | Performance measures | Homeowner focus

Ref	Measure	Target	YTD Result		Status Trend
4.2.2	Surveyed homeowners are satisfied with their overall claims experience	≥60%	70%		↑ 1.5% on Feb-26 EOM
4.2.3	Complaints are resolved within 2 months or within a longer period, as agreed with the homeowner	90%	98.6%		On Track
4.2.4	NHC Toka Tū Ake settlements should be enduring: percentage of settled claims reopened within 6 months	≤3%	1.1%		On Track

Output 4.2 | Performance measures | Quantity

Ref	Measure	Target	YTD Result		Status Trend
4.2.5	The ratio of claims handling expense to settlement cost for the period is less than the ratio set by the Board	Less than ratio			Threshold headroom 12.6% Threshold headroom 13.7% Threshold headroom 9.2%

SoPE 4.2.5 observations:
As at 31 Mar 2026, FY2025-26 performance remains within expectations, with a claims handling expense (CHE) ratio of 97.8% observed vs. YTD target threshold ratio of 107%.

Note:
In line with Q1 and Q2 results, the Q3 result reflects low total settlement costs and continued strong per-claim performance. In a low-claims year, fixed insurer agency fees represent a proportionally larger share of total CHE costs. Annual per-claim agency fee expectations exclude wash-ups, which remain uncertain until Q4. Given low claim volumes, trends should be interpreted with caution.

Notes

- This measure is specific to claims managed by our insurer partners under the Natural Disaster Response Model (NDRM), which commenced on 30 June 2021.
- The threshold is recalibrated each month, and excludes Kaikōura and includes some allowance for annual fixed fees.
- The methodology used to calculate this measure was originally approved by the Board on 12 May 2021, and recalibrated again following approval by the Board in February 2025.

Section 2 - Resilience

Our Resilience Strategy

A new NHC Resilience Strategy for Natural Hazard Risk Reduction 2024-2029 was published in late 2024. It refreshes the previous Resilience Strategy (2019-2024), and re-confirms our commitment to natural hazards resilience as follows:

Our goal is to inform, enable and influence the choices and decisions that reduce vulnerability and the exposure of New Zealand's built environment to natural hazard events.

In simple terms, the result will **be stronger homes, built on better land**.

WE WILL DO THIS THROUGH:

Building knowledge, data and insights on natural hazard impacts and ways to reduce them

Enabling, influencing and advocating for natural hazards resilience

RESEARCH	LOSS MODELLING	RISK REDUCTION	PUBLIC EDUCATION
Objective: Invest in research and capability targeted to reducing the risk of impacts from natural hazards on people, property, and the community.	Objective: Provide an authoritative, insightful, and internationally respected view of New Zealand's natural hazard risk	Objective: Inform, enable, and influence evidence-based risk reduction decision making and action.	Objective: Empower individuals, households and communities with information and actions they can take to manage risk and strengthen resilience.

Quarterly update (quarter ending 31 March 2026)

Building knowledge, data and insights on natural hazard impacts and ways to reduce them.

• Research • Loss modelling

Click on the image above to find out more about funded projects on the go

Research

Ten research projects have been completed this quarter:

- ***Building Resilience and Adaptation into Mana Whakahono a Rohe,*** from E oho Awakening Aotearoa
- ***Seismically Resilient Partition Wall Design and Testing,*** from University of Canterbury
- ***Insurance settlement following the 2016 Kaikōura Hurunui earthquake a comparison of rural, town and city claimant experiences and behaviours,*** from Resilient Organisations
- ***Building and Earthquake Catalogue for the Alpine Fault near Haast, New Zealand, using Distributed Acoustic Sensing Data,*** from Victoria University of Wellington
- ***Managed Retreat, Private Insurance Retreat, Public Insurance and the Connections Between Them,*** from Victoria University of Wellington
- ***Wellington Earthquake Scenarios and Seismic Design,*** from University of Auckland
- ***Identifying The Barriers and Challenges for Māori in Accessing Natural Hazards Insurance Cover,*** from Auckland University of Technology
- ***Earthquake Reconnaissance in Bangkok,*** from University of Auckland
- ***InSAR monitoring of slopes to build back safer,*** from University of Auckland
- ***Inventory of earthquake-prone timber frame buildings with masonry components,*** from University of Auckland.

This quarter, we also sponsored

- Disastrous Doctorates – a student-led conference of graduate students of natural hazards disaster research.
- New Zealand Planning Institute Conference – a conference for land-use planning professionals, which included hosting a field trip, chairing a plenary panel session, facilitating a workshop, and having a booth.

Section 2 - Resilience (cont.)

Quarterly update (quarter ending 31 March 2026)

Building knowledge, data and insights on natural hazard impacts and ways to reduce them.

• Research • Loss modelling

Enabling, influencing and advocating for natural hazards resilience

Loss Modelling

- Internal cross-business workshop was held to develop and shape Natural Hazards Intelligence Action Plan.

Risk Reduction

- Feedback was provided on the draft guidance to support the implementation of the **National Policy Statement – Natural Hazards.**
- Submissions were made on the **Building (Earthquake-prone Buildings) Amendment Bill, the Planning Bill, and the Built Environment Bills,** with the latter two including appearance at Select Committee.
- A submission was made on the **Central Hawke's Bay District Plan Change 1**, supporting the avoidance of active faults in a proposed greenfield development area.

Portal

- Development of the new Natural Hazards Portal continues to progress toward public go-live in June 2026.

Public Education

- Filming completed for new earthquake preparedness creative under our '*Don't Wait for the Woah*' platform, with a multi-channel campaign (video, digital, social media, radio and outdoor) scheduled to go live from mid-May.
- Progress continues on two key procurements for our advertising/media and market research partners with advertising/media prioritised for a closed tender run in two phases. Both procurements are due for completion by end of June.
- We supported the internal audit of the Public Education programme through documentation provision and interviews with key personnel.
- Planning is largely complete for our latest CORE Education virtual field trip for 10-14-year-olds focussing on landslides, with filming aligned to the LaRGE conference in Queenstown in late April.

Click on the image above to find out more about what we're doing with our loss modelling

- A proposal has been received from Te Papa for a further three years of sponsorship including new initiatives and continued support for successful programmes such as *Whakarūaumoko: Active Land* exhibit and *Rūaumoko: Restless Land* exhibition.
- New emergency preparedness collateral, with a PhD student and Emergency Management Southland was co-developed with the aged community.
- A three-part video series is in development using Cyclone Gabrielle buy-out homes to help homeowners/buyers understand natural hazard cover, land cover limitations, and complex land claims.

Click on the image above to find out more about how we work to reduce risk and build resilience

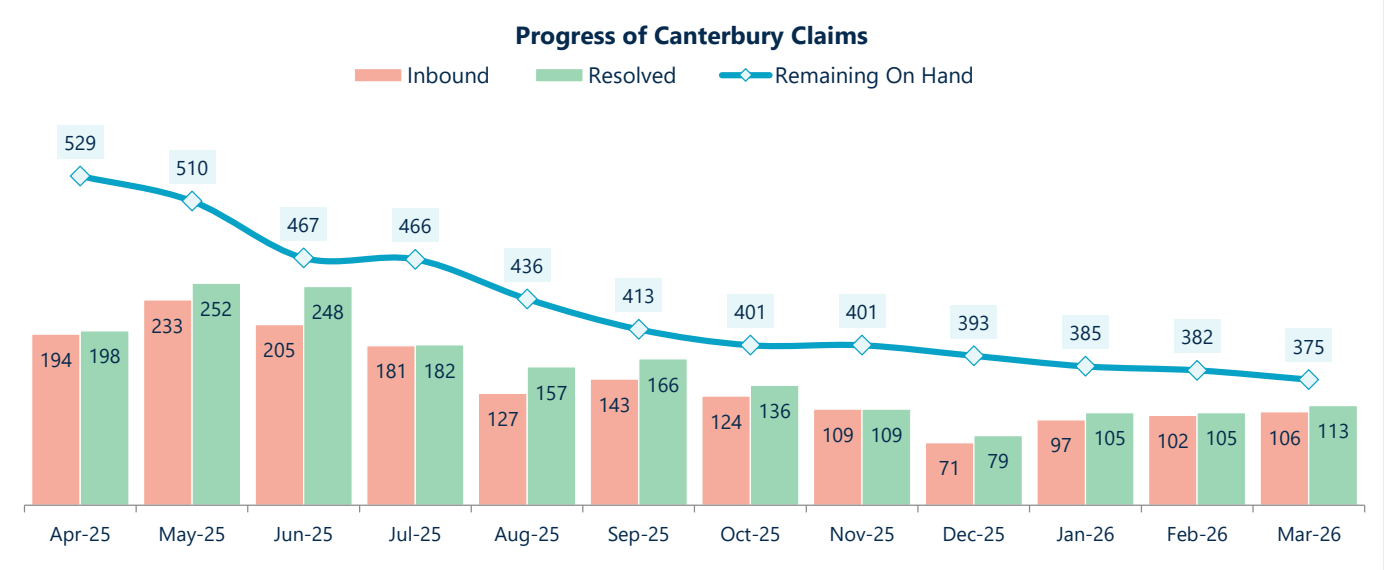
Public education survey results FY25-26	Q1	Q2	Q3	Q4	FY25-26
Percentage of homeowners surveyed who say they have taken action across six key preparedness actions promoted by Toka Tū Ake EQC (target >57%)	63%	57%	67%		

Section 3 - Recovery | Canterbury earthquake sequence claims

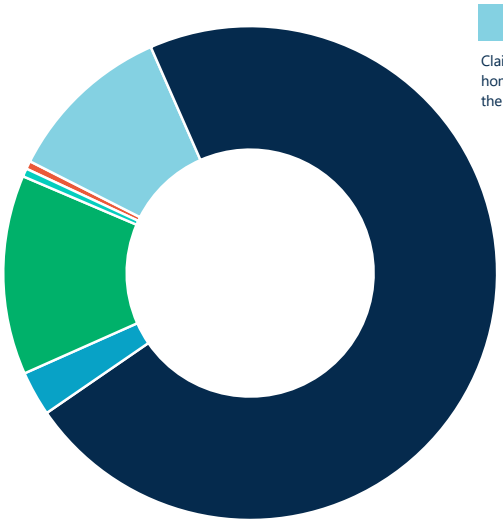
Of the claims resolved during March, 51% had been reopened within the past three months, and 11% of resolved claims were aged over 12 months since their last reopen instance.

In March 2026, homeowner queries were predominantly driven by drainage, plumbing, and structural dwelling issues, collectively accounting for 46% of all queries received. Newly identified damage (recorded as missed damage) accounted for the majority of reopen reasons, 72% of reopened claims.

The age profile of remaining Canterbury claims remains consistent with expectations as volumes continue to decline. As at March 2026, approximately 30% of claims are aged less than three months old, while aged claims (>12 months) represent 22%. Settling aged claims remains a priority, with 87 aged claims on hand at month end (up from 84 last month) and a further 96 ageing claims.



Open Canterbury Claims by Reopen Reason



Additional Payment, 0.5%

Claim has been reopened to make additional payment/s to settle Natural Disaster Damage in accordance with EQC Act, and any other payments required to support resolution of the claim.

Requested information received from homeowner, 0.5%

Claim is reopened as the homeowner has returned with information previously requested by NHC Toka Tū Ake to progress the claim.

Repair Methodology, 3%

Claim has been reopened as the homeowner has concerns regarding elements of the repair methodology* or strategy that was recommended or followed, to settle natural disaster damage in accordance with EQC Act.

* Methodology: determining a repair strategy for damage relating to Natural Disaster using appropriate qualified specialist assessments.

Homeowner Complaint, 11%

Claim is reopened due to formal expression by the homeowner of dissatisfaction with the management of the claim.

Missed Damage, 72%

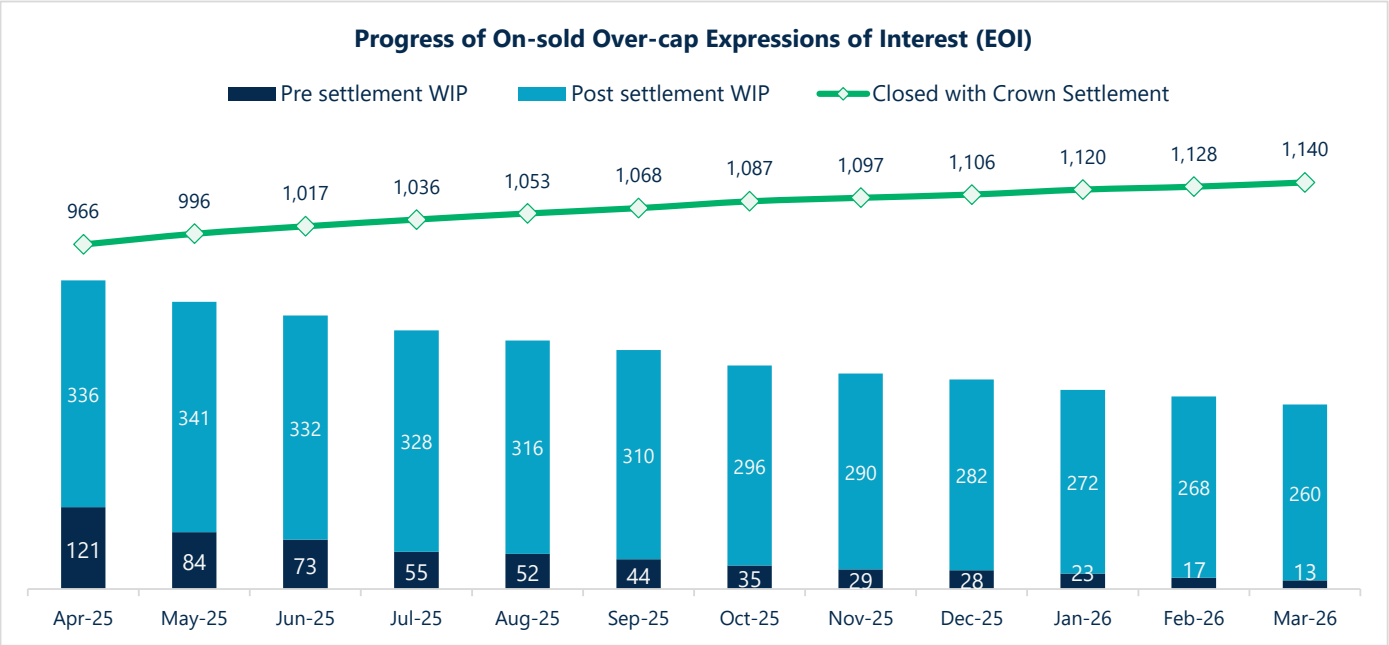
Claim has been reopened as the homeowner has concerns regarding additional damage on previously scoped or unscoped elements and requires review and assessment.

Repair Quality, 13%

The homeowner has identified defects or quality issues with repairs previously completed and managed by NHC Toka Tū Ake* that need to be assessed to settle Natural Disaster Damage in accordance with the EQC Act.

*Note: Issues with repairs managed by the homeowner following cash settlement need to be resolved directly by the homeowner with the contractor.

Section 3 - Recovery | Canterbury earthquake sequence claims (cont.)



At the end of March 2026, our On-sold WIP includes:

- **Pre-settlement** - 13 applications on hand that are being managed through our On-sold assessment/settlement process ('Pre-settlement'), including 5 Awaiting Agreement with homeowners.
- **Post-settlement** - 260 applications with customer acceptance of settlement offer, being prepared for payment, or with tranche payments in progress for homeowner-managed repairs.

Section 3 - Recovery | Claims relating to natural hazard events (excl. Canterbury)

Introduction

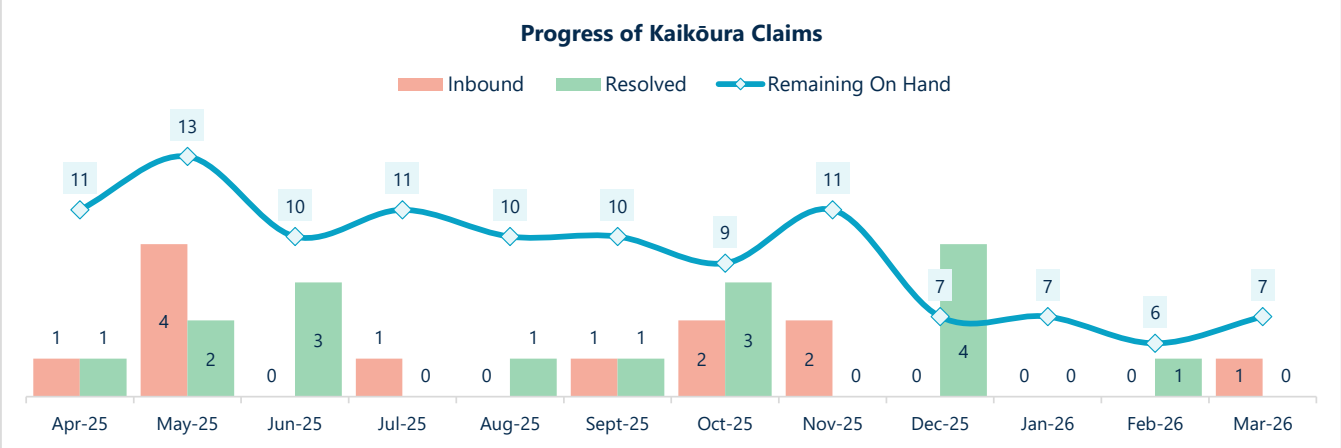
This subsection reports on the progress of outstanding claims not related to the 2010-11 Canterbury earthquake sequence. We report on two distinct groups within this subsection based on who manages the claim i.e.:

- The small number of claims that are directly managed by NHC Toka Tū Ake i.e., historic claims that pre-date the Natural Disaster Response Agreement (NDRA); and
- The vast majority of claims managed by our NDRM insurers under the NDRA.

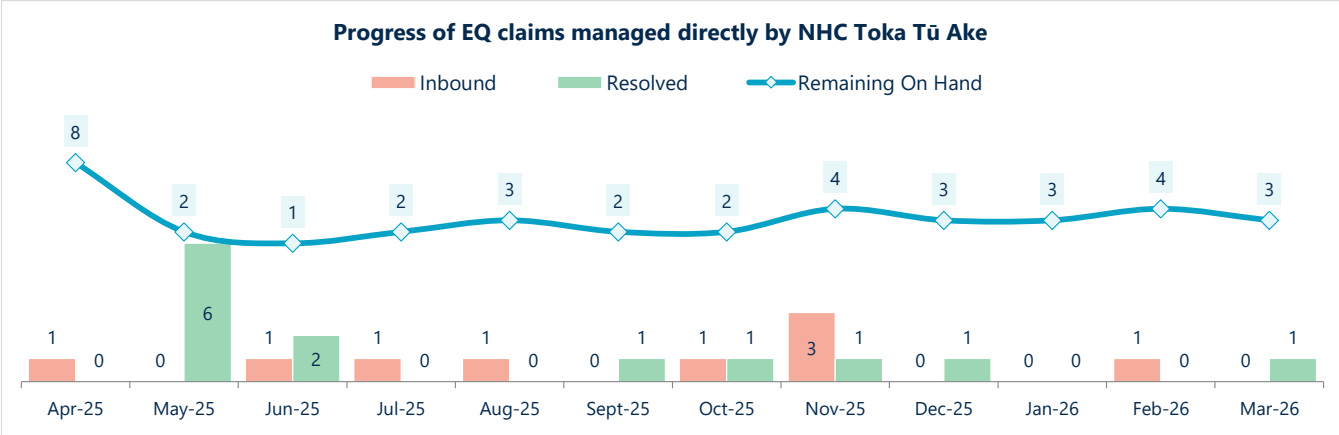
Historical claims managed directly by NHC Toka Tū Ake

The first part of this subsection looks at the progression of the small number of claims directly managed by NHC Toka Tū Ake i.e., historic claims that pre-date the NDRA.

Kaikōura



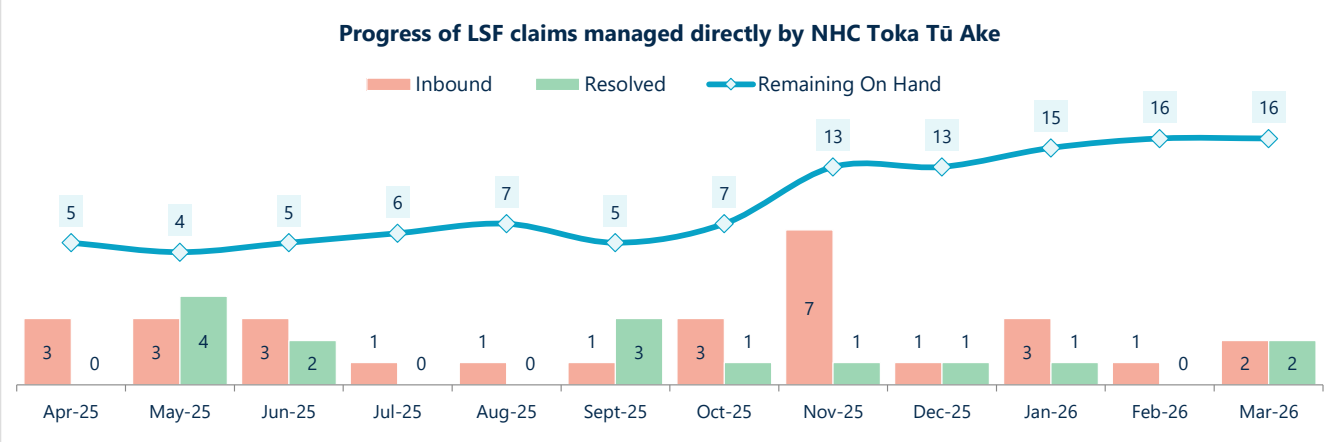
NHC Toka Tū Ake managed Earthquake (EQ) Claims



Section 3 - Recovery | Claims relating to natural hazard events (excl. Canterbury) (cont.)

Historical claims managed directly by NHC Toka Tū Ake (cont.)

NHC Toka Tū Ake managed Landslide/Storm/Flood (LSF) Claims

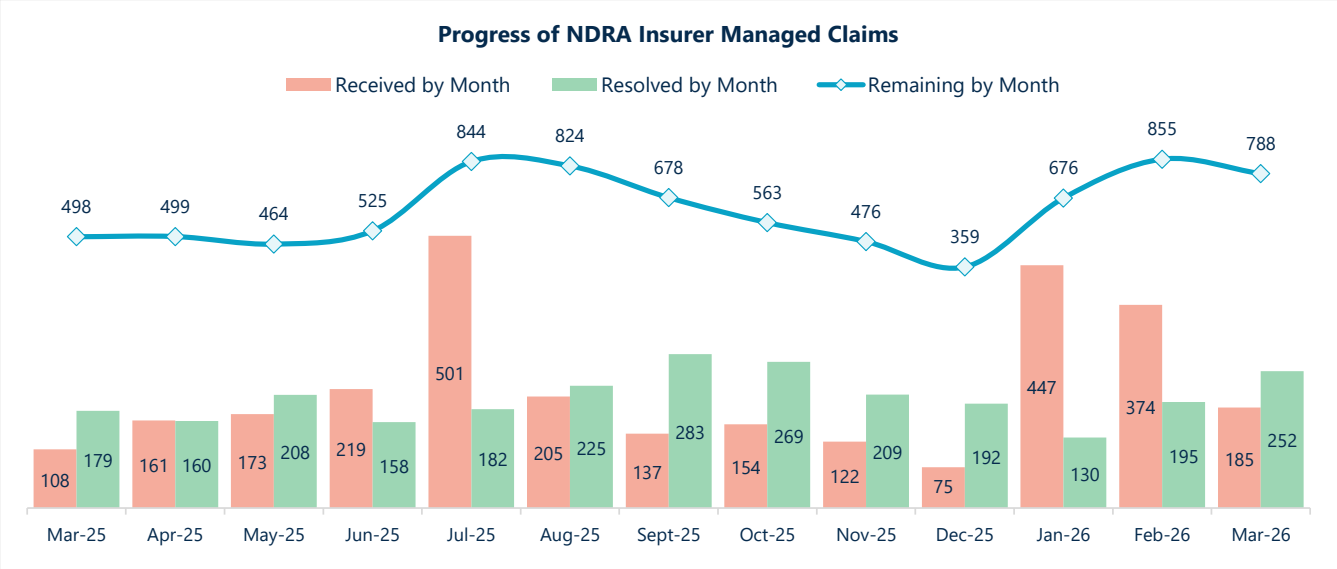


Claims managed by our NDRM insurers under the NDRA

The second part of this subsection looks at the claims managed by our NDRM insurers under the NDRA.

Since commencement of the NDRA, we've received 23,087 claims (cf. 22,874 reported last month). Just over 78% of reported claims are related to a weather event.

From a loss event perspective, a significant proportion of claims received to date relate to the January–February 2023 North Island weather events. Of the 8,709 claims attributable to those events, over 99% have been resolved.

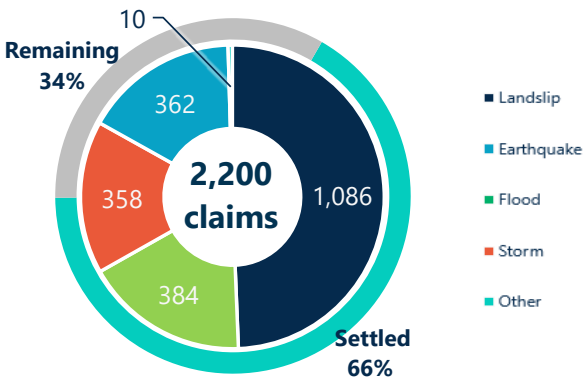


The visual above shows a 13-month rolling view of the progress our NDRM insurers have made in settling claims under the NDRA.

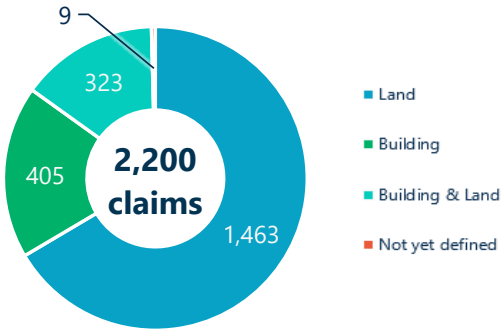
Section 3 - Recovery | Claims relating to natural hazard events (excl. Canterbury) (cont.)

Claims managed by our NDRM insurers under the NDRA (cont.)

All claims received by our NDRM insurers FY2025-26 year-to-date by loss cause



All claims received by our NDRM insurers FY2025-26 year-to-date by exposure type



Section 4 - Resolving alternative homeowner pathways

Complaints

In this section, we monitor the resolution of complaints made against NHC Toka Tū Ake and its NDRM insurers. Specifically, we report on whether complaints are being resolved in a timely manner.

Insured persons can make a complaint when they are dissatisfied with:

- the outcome of their claim
- the way they have been treated, for example if they believe the Code of Insured Persons' Rights has been breached
- the way their claim has been managed.

This section also provides visibility on the uptake of other resolution avenues available to insured persons.

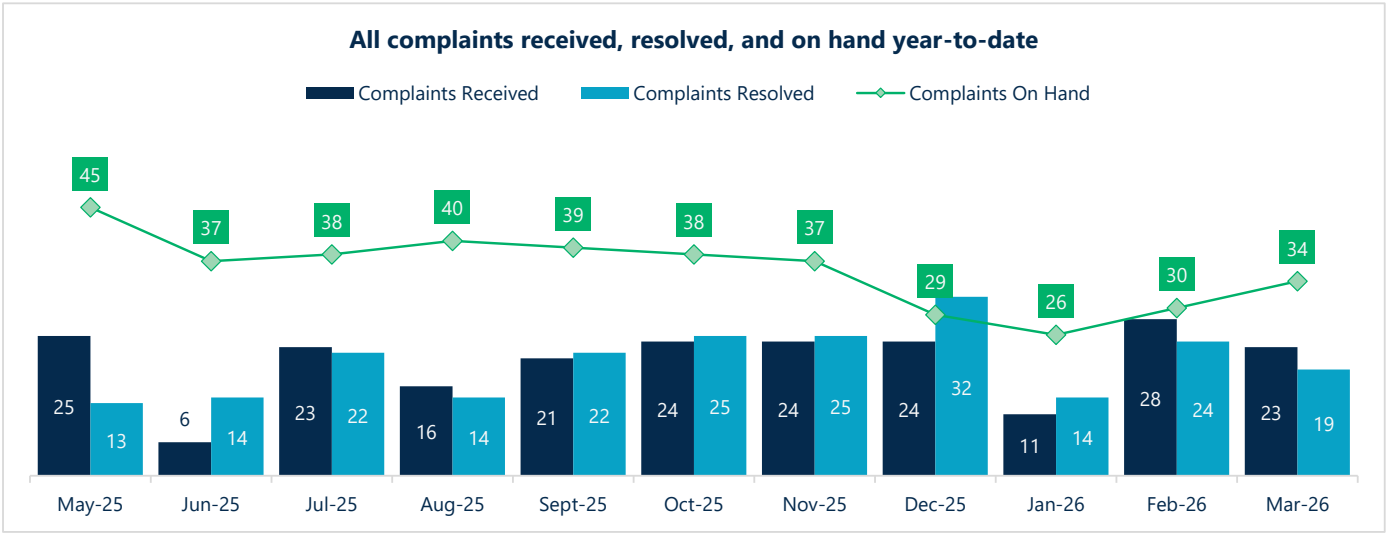
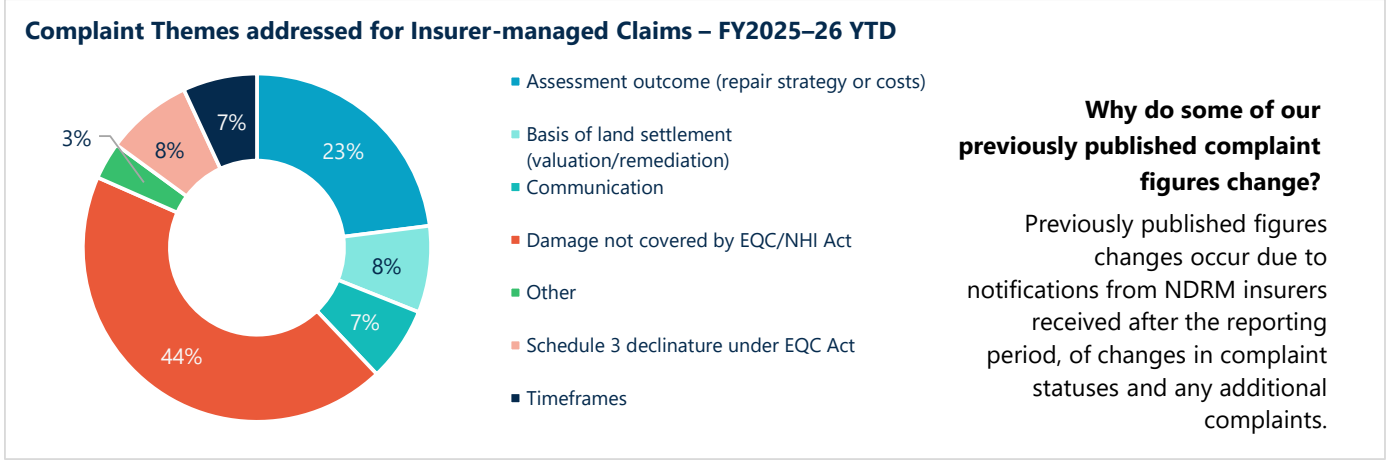
On hand	TOTAL	**4**	**6**	**24**	**34**





Why do some of our previously published complaint figures change?

Previously published figures changes occur due to notifications from NDRM insurers received after the reporting period, of changes in complaint statuses and any additional complaints.

Section 4 - Resolving alternative homeowner pathways (cont.)

Code of Insured Persons' Rights

You're protected by the Code of Insured Persons' Rights

The Code of Insured Persons' Rights (Code) supports homeowners to have their claim managed and settled in a fair and timely manner. Their rights and the obligations of NHC Toka Tū Ake and NDRM insurers are outlined in full in the Code. The Code applies to any interactions from 1 July 2024 for new or existing claims. NHC Toka Tū Ake, or anyone working on our behalf, must follow the Code.

If homeowners believe we have not followed the Code during the claims process, they can make a complaint. We or the NDRM insurer (depending on who the complaint was made against) will investigate the complaint and advise homeowners of the outcome. If there is a breach, we or the NDRM insurer may take one of the actions listed in the Code.

Reporting on Code-related complaints

This section monitors complaints made by insured persons. Specifically, we report on whether we're resolving complaints in a timely manner and reporting on the uptake of other resolution avenues available under the Code.

The Code is a requirement under the NHI Act and addresses the lessons from previous natural hazard events.

Fair Way Dispute Resolution

Insured persons can enter an independent dispute resolution process with Fair Way in respect of referable decisions. The below tables summarise progress of insured persons who have opted for this independent dispute resolution process during FY2025-26.

Disputes notably increased during October with the transition of management of pre 1 July 2025, EQC Act NDRM managed claim related disputes from the Insurance and Financial Services Ombudsman (IFSO) to Fair Way, after IFSO withdrew their services.

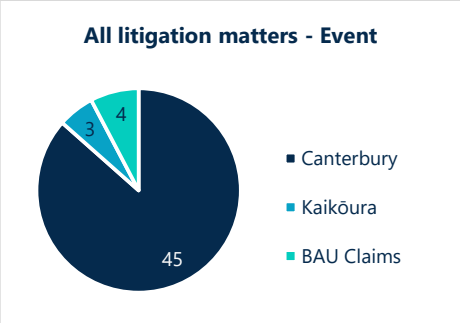
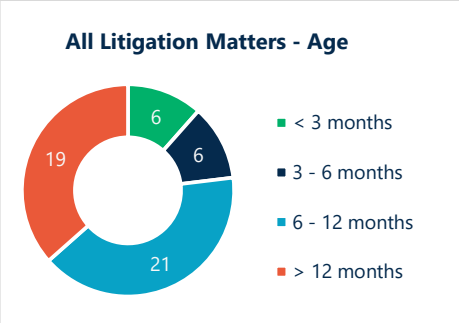
Claims subject to litigation

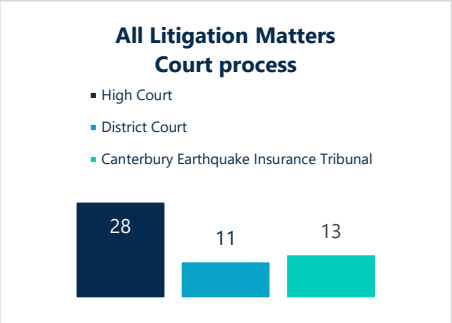
Insured persons can raise a dispute if they disagree with a decision on their claim. The final part of this section examines litigation matters as they are referred to in our reporting.

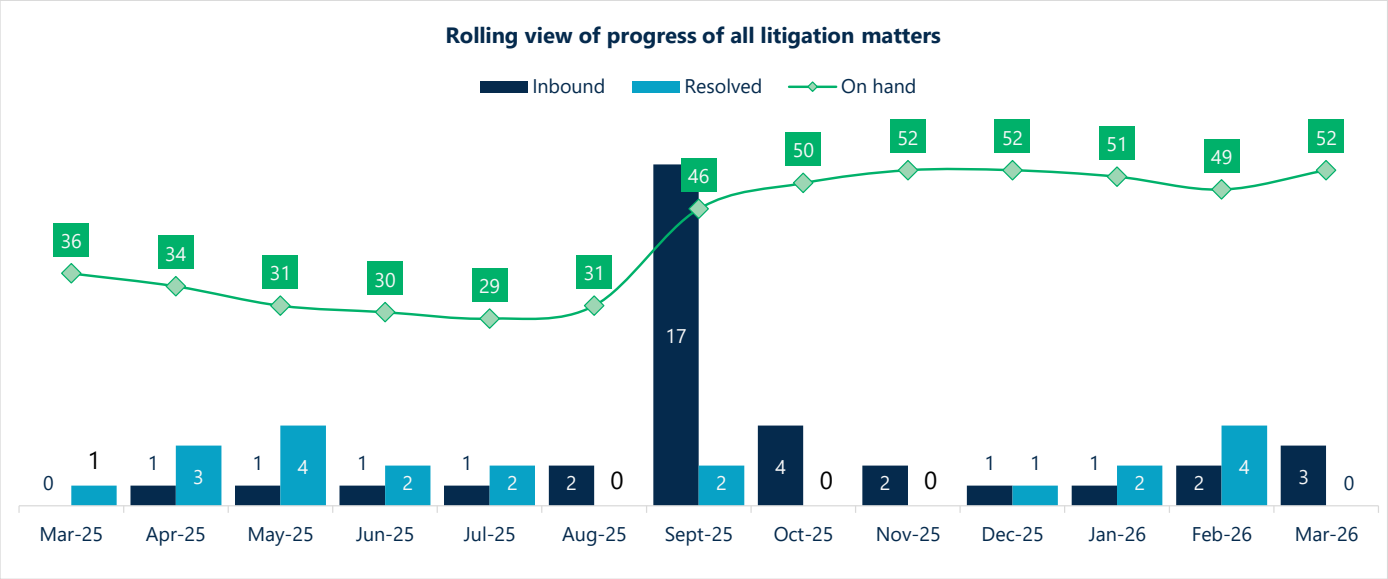
More information about how to raise a dispute can be found here.

Currently, there are 52 litigation matters in progress, up three from last month. Much of the increase observed in September reflects customers electing to preserve their position regarding limitations. The following visuals present these litigation matters from several perspectives.



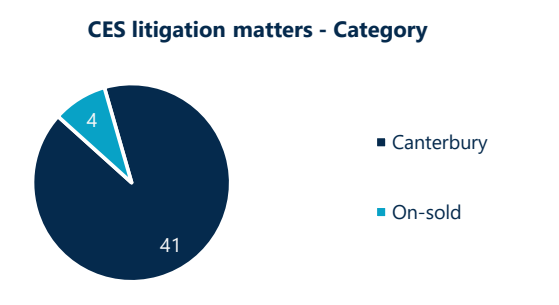


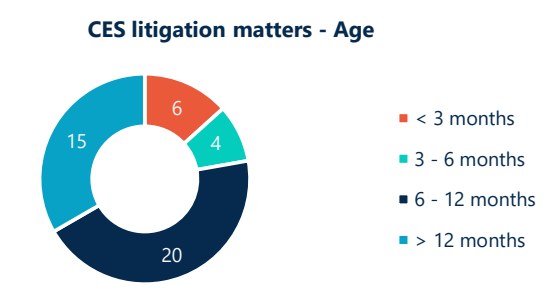




Canterbury Earthquake Sequence 2010-11 (CES) claims subject to litigation matters

Litigation matters relating to CES claims account for 45 of the 52 litigation matters currently in progress. The following visuals provide a breakdown by work programme and by age.





Section 5 - Coverage and engagement through media

Media coverage across January - March

This quarter we increased our reach and visibility across mainstream and social media, and saw a higher number of visits to the NHC Toka Tū Ake website. Mainstream media coverage rose to 279 mentions of NHC, up from 175 last quarter (59%). The increase was driven by proactive media work and 12 media enquiries. Most coverage was neutral or positive in tone.

Social media reach and engagement increased by 46% and visits to our website rose by 69% from the previous quarter, reflecting the relevance and timeliness of our content, refreshed 'Be Prepared' material, and improved website accessibility.

Media

Of the 279 media mentions of NHC Toka Tū Ake this quarter, around half were generated by our proactive media releases, and a further 20% from responding to media enquiries. We were also mentioned in many articles regarding the Government's insurance affordability review.

Proactive media

We issued three media release over the quarter, on:

- The release of our inaugural Statement of Investment Policies and Objectives (SIPO)
- Our 2025 Resilience Highlights Report (including pitching individual research stories within)
- Announcing the recipient of the inaugural Fleur Templeton Award, honouring legacy of late science communicator and employee of NHC, Fleur Templeton.

Reactive media

We responded to 12 media enquiries, including:

- RNZ and The Press on status of the Canterbury recovery
- RNZ on a complex landslide claim, and another on private insurers deciding not to offer new policies in some areas
- Stuff on how section 72 notices affect NHCover.

Web stories published:

We also published and shared three web stories, covering researcher profiles and the work of NHC funded interns at Crisis Response and Integrated Simulation Science Laboratory (CRISiSLab), a research and learning laboratory based in Massey University in Wellington within the Joint Centre for Disaster Research (JCDR).

Media coverage volume, reach and sentiment

One third (31.2%) of our 279 media mentions were positive in sentiment this quarter (87), 67.4% were neutral (188). The small number (1.5%) of negative or mixed sentiment articles were focussed on the Canterbury recovery.

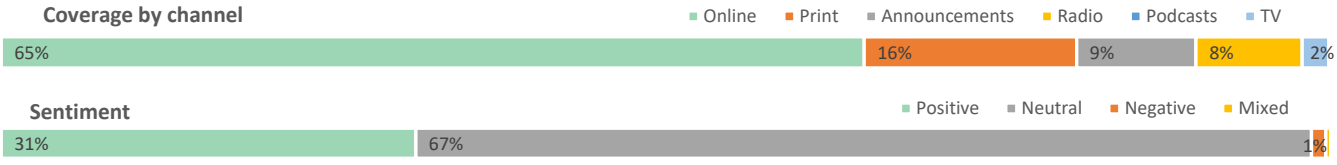
Proactive coverage with the most reach included:

- One News: *How the 'twin threats' of Taupō could help predict future disasters*
- The Post: *Auckland's hidden faults: New research detects 5 times more earthquakes beneath the city*
- RNZ: *Previously unknown faultlines discovered in Auckland*
- Interest.co.nz: *Natural Hazards Commission lays out its long-term investment plans for the Natural Hazards Fund, which has around $670 million*

Month	Mentions	Potential reach
Oct-25	85	9,297,862
Nov-25	104	13,359,162
Dec-25	88	9,327,369
Jan-26	63	20,218,702
Feb-26	142	27,353,375
Mar-26	74	21,742,651

What's the difference between 'views' and 'reach'?

Views are when people come to our social media page and 'view' it. Reach is how many people saw the social media post/posts on their own social media feed.



Social Media

We posted 45 times on LinkedIn and Facebook, focussing on our four key areas of insurance/recovery, safer homes, research, and our people/workplace.

Overall, engagement and reach with our audience increased by 46% over the quarter – reflecting timely and relevant content delivered to viewers.

Views/impressions: 2,286,986 (Q1), 1,437,282 (Q2), 2,100,650 (Q3)

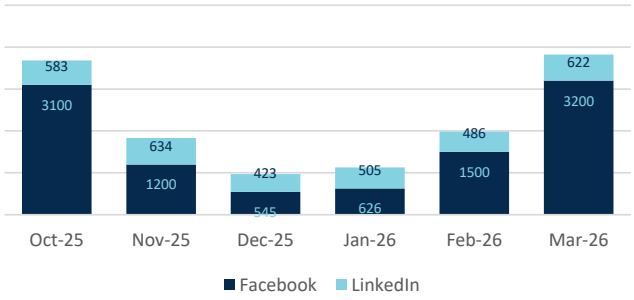
Our organic reach has seen a 293% increase from previous quarters. Organic reach means the number of users who see our content without paid promotion. There is a range of reasons why platforms may promote unpaid content, with audience engagement (likes, comments, or shares) being one of the key explanations.

Organic reach: 158,871 (Q1), 58,962 (Q2), 624,770 (Q3)

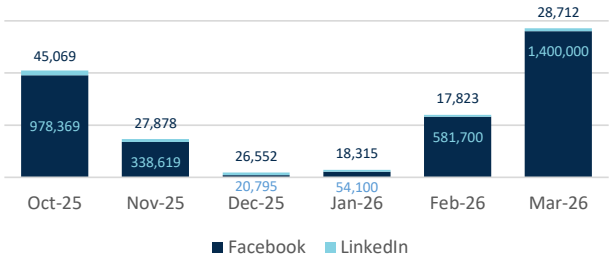
Highlights

- Our social media audience continued to grow over the quarter. On Facebook, followers increased from 5,631 in January to 5,714 in March. On LinkedIn, followers grew from 9,782 to 10,038.
- Engagement with our posts increased by 43%, including more likes, comments, shares and saves, enabling us to answer more questions and clarify information. Overall, comment sentiment was positive.
- We promoted 12 posts to increase awareness of NHC's focus on insurance and recovery. This included a light -hearted post with an important safety message about securing hot water cylinders, and a post about a historic event that received our highest level of engagement.
- Clicks on links increased by 121% compared with the previous quarter. This shows our content is encouraging New Zealand homeowners to take action. Visits to our website from unpaid social media posts also increased strongly, up 174% from the previous quarter.

Social media profile **views**



Social media profile **reach**



Website

Visits to the website were up 69% this quarter. Several factors could have influenced higher traffic, including the promotion of our digital marketing campaigns and significant weather events.

We published several updated pages in the *Be prepared* section – helping New Zealand homeowners to better understand the risks they face around their home, and how to take action. We also made some updates to improve overall accessibility and usability.

Focus areas for the website in Q4 are:

- Release of the Know Your Cover campaign content, and our new earthquake preparedness campaign 'Don't Wait for the Woah'
- Wrapping up our *Be prepared* section rewrite, and improving the information architecture
- Improved look and feel of landing pages.

Quarter	Page views	Visitors	Average time spent on page (sec)

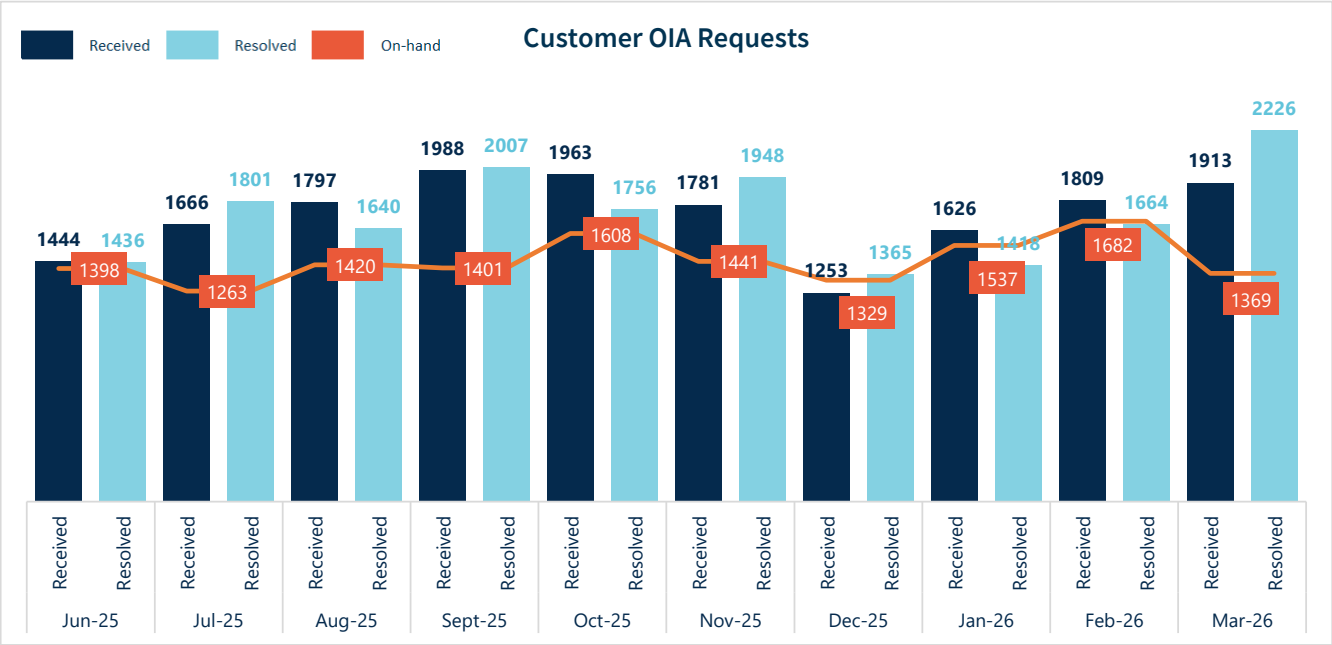
Section 6 - Complying with the Official Information Act (OIA)

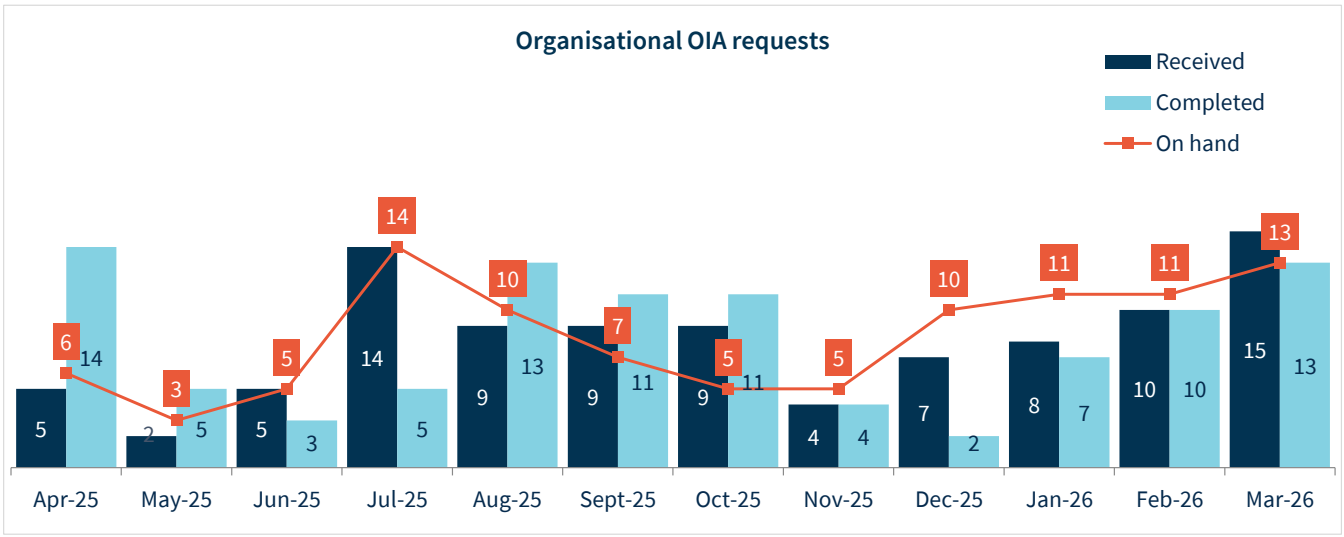
Our OIA team supports the work of NHC Toka Tū Ake by responding to requests for information covered by the Official Information Act and the Privacy Act. This requires investigating requests for information, communicating with the requestor and producing logical and factual reports.

Our reporting encompasses our two information request workstreams:

- Customer OIA requests (claim related information requests)
- Organisational OIA requests (all other information requests).

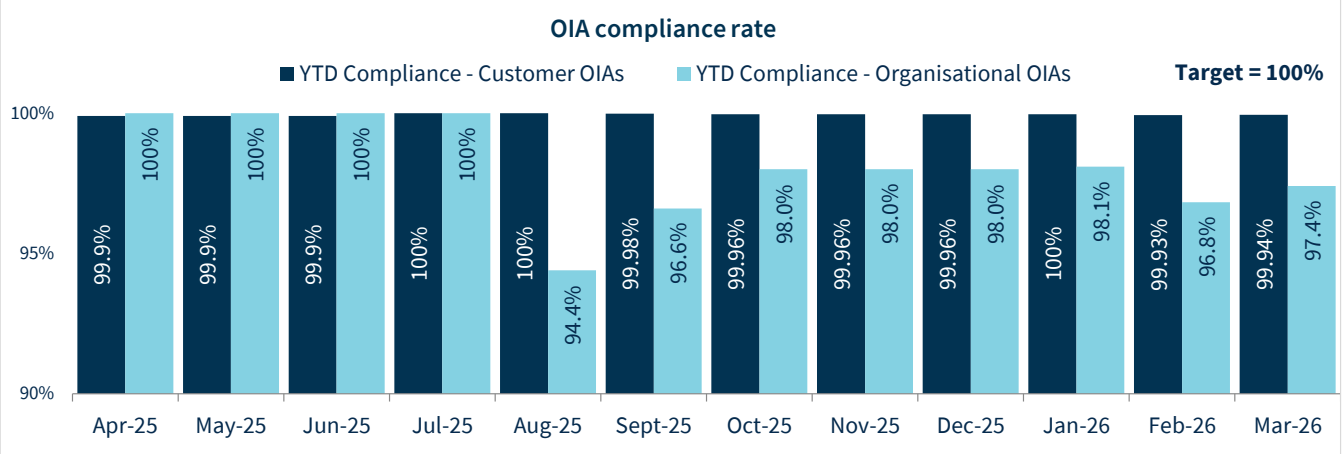


Across March, our Customer OIA and Contact Centre Teams received 1,913 new OIA requests (cf. 1,809 for Feb-26). Combined with the 1,682 requests on hand from last month and resolution of 2,226 requests this month, we have 1,369 requests on hand at month end.



Across March, our Government Relations team received 15 new organisational OIA requests (cf. 10 in Feb-26). Coupled with the 11 requests on hand from last month and 13 completed requests this month, the team had 13 requests on hand at month end.

Section 6 - Complying with the Official Information Act (OIA) (cont.)



Across March, our Customer OIA and Contact Centre teams achieved a compliance rate of 99.9% across 2,226 completed responses. Our Government Relations Team achieved a 100% compliance rate across 13 completed responses.

Ombudsman review of complaints received

Across March, we received six notices of formal investigation. During this period, the Ombudsman formed one formal investigation opinion in NHC's favour.

Ministerial correspondence

During the month, NHC Toka Tū Ake received three requests to draft a response for the Minister's Office.

Across FY25-26 year-to-date, we have provided responses to 16 requests from the Minister (cf. 26 across FY24-25).

Contact centre performance - Phone Calls

	Nov-25	Dec-25	Jan-26	Feb-26	Mar-26
Outbound - Inbound Ratio	9:91	12:88	10:90	13:87	8:92
Grade of Service	86%	86%	89%	83%	89%
Abandonment Rate	1.1%	1.0%	1.3%	1.2%	0.7%
Roll Over No Answer	14	8	12	15	8
Total Calls	1,378	919	1,051	1,408	1,352
Total Email and Post	3,532	2,719	2,573	3,163	3,891

Contact centre performance - Grade of service (GoS)

Grade of service this month

Across March, our Grade of service (GoS) for emails was 100% (unchanged from last month), while 89% GoS was achieved for phone calls (83% last month).

Quality of the customer experience this month

The customer experience this month remains very positive at 97% (97% last month) across 603 surveyed customers (cf. 577 surveyed last month).

Received

1,240 calls via 0800 DAMAGE
(cf. 1,220 last month)

1,665 emails via info@naturalhazards.govt.nz

Explained: Grade of service

Grade of service is defined as calls answered within 20 seconds and emails responded to within 7 working days.

Explained: Customer experience rating

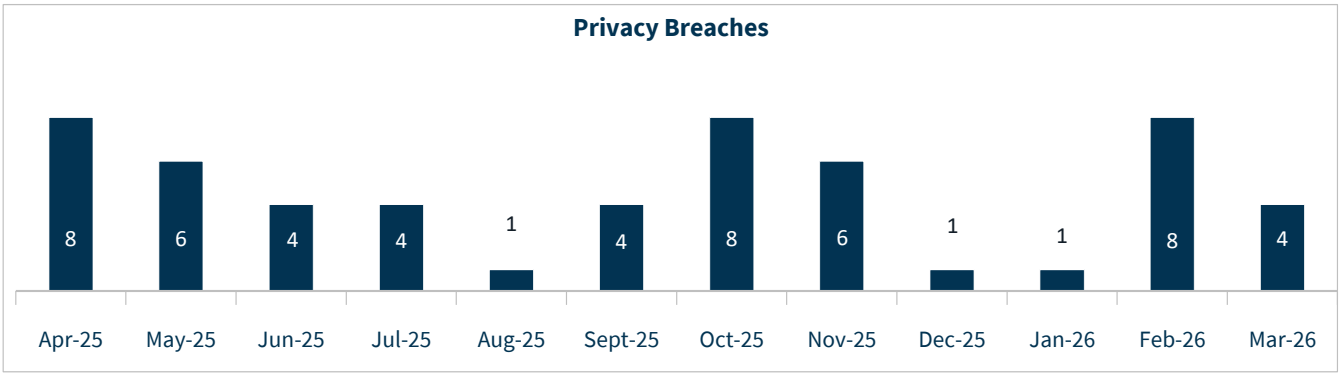
Customers are invited to complete a survey after every call to rate their experience on a scale of 1-7.
The descriptors used for the scale are as follows:

1 and 2 = negative; 3 and 4 = neutral; and 5,6,7 = positive.

Overall rating is the total positive ratings divided by total responses.

Section 7 - Data Protection

Across the third quarter, 13 privacy breaches (cf. 15 for Q2 25-26) were reported to our Risk and Compliance Team. None of the privacy breaches reported this month met the notification threshold requiring us to report the breach to the Office of the Privacy Commissioner.



Privacy breaches

All 13 reported breaches this quarter were triggered by NHC Toka Tū Ake while none were attributed to our NDRM insurers. The 37 reported breaches so far in FY25-26 represent a 23% decrease in breaches for both NHC Toka Tū Ake and NDRM insurers compared to the 48 breaches reported in the same period the previous FY.

We have implemented an enhanced incident reporting tool that improves oversight, speeds response times, strengthens accountability, and reduces the likelihood of recurring incidents.

Implementation of IPP3A (Information Privacy Principle 3A) is progressing, with Privacy engaging most of the business to map indirect collection practices and identify any applicable exceptions. A comprehensive register is being compiled to capture these details, to support transparency and ongoing compliance. IPP3A is a major part of The Privacy Amendment Act that will come into force on 1 May 2026. Under IPP3A, if an agency collects a person's personal information from someone other than the person themselves (i.e. indirectly), then that agency is required to tell the person, unless an exception applies.

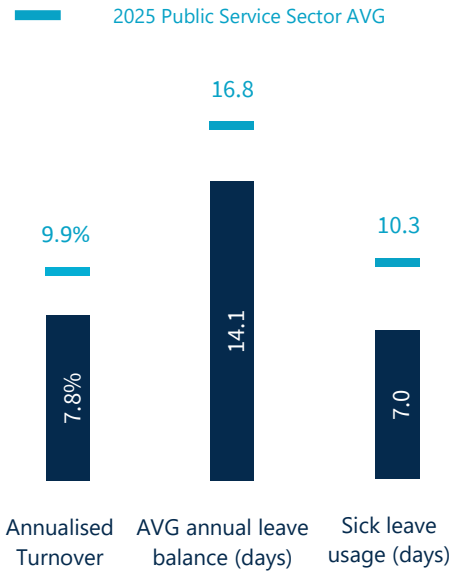
Section 8 - Our People

Across March, our permanent workforce headcount increased by 4 to 356. Our headcount equates to 351.65 full time equivalent units (FTEs).

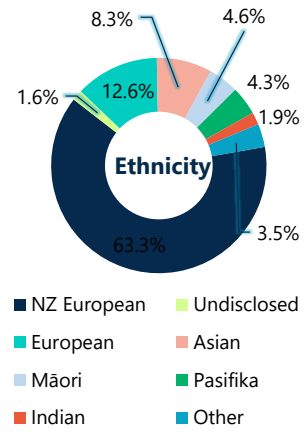
Across the month, our average annual leave balance increased by 1.3 days while average sick leave usage and our annualised turnover rate ('voluntary turnover') remain stable. All these averages continue to compare favourably to public sector averages.

Our People, Culture, and Capability team continues to actively work with our people leaders to understand employee departure causes, future requirements, and the importance of productive conversations to retain our talent. Regular feedback from people leaders is also part of staff development plans to foster positive employee engagement.

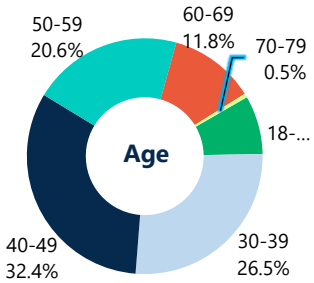
Comparison of NHC Toka Tū Ake averages against sector averages

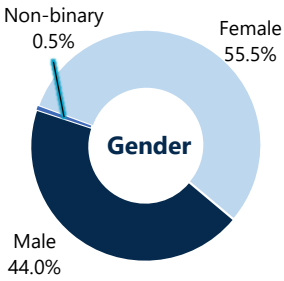


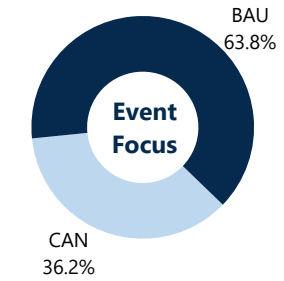
Our people at a glance

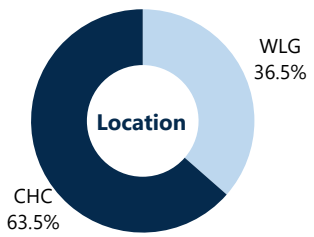


Note: 'Other' includes the category MELAA - Middle Eastern, Latin American, African

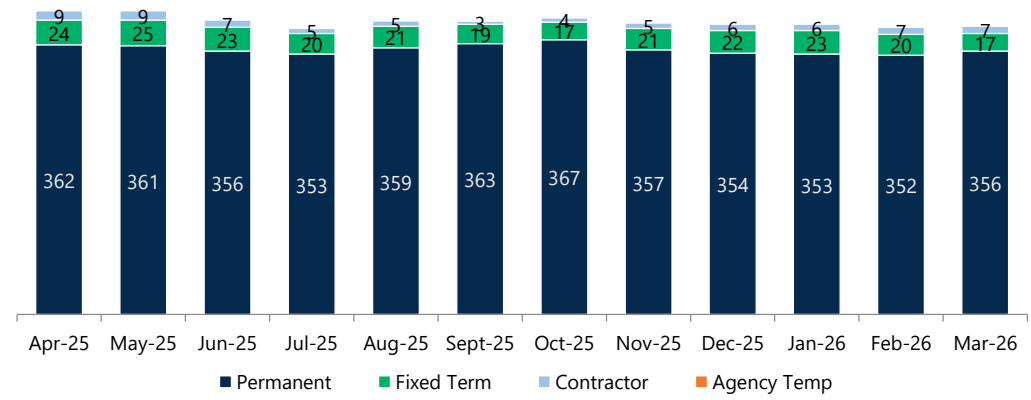




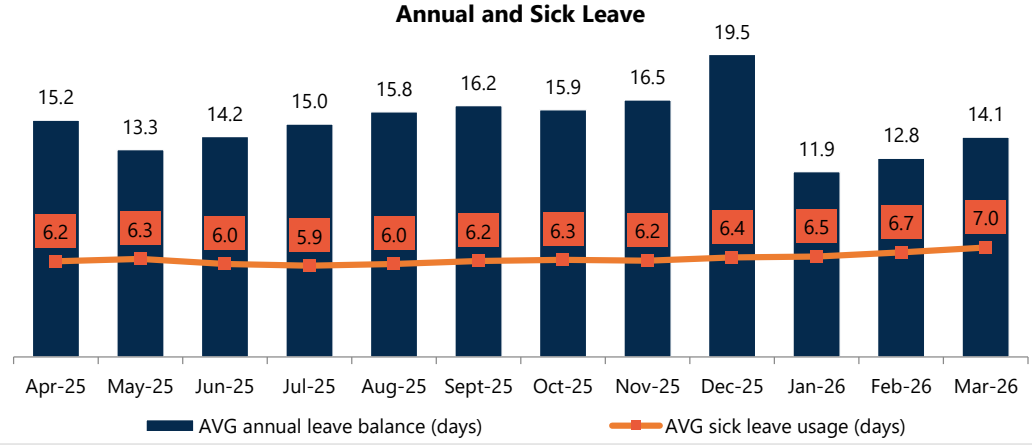




Headcount Movement



Annual and Sick Leave



Across March, our average annual leave balance increased to 14.1 days. Currently, 26.3% of our people have an annual leave balance of 20+ days (cf. 20.7% last month). This is an cyclical increase with more leave expected to be taken in April due to Easter and the school holidays.

Leave planning continues with those who have leave balances of over 20 days to ensure forward leave is booked to manage balances down.
