How to use this dashboard

This dashboard shows a monthly snapshot of EQC's progress across its operational spectrum as well as how we track in relation to the performance measures in our *Statement of Performance Expectations 2021-22*. Below is a summary of each section.

Section 1 - Statement of Performance Expectations (SoPE) measures

This section shows progress across those SoPE measures that can be measured on a monthly or quarterly basis. The results are cumulative year-to-date results which reflect the year-to-date progress bar to reach the year-end target. The SoPE 2021-22 is one of our public accountability documents which can be found on our website:

https://www.eqc.govt.nz/about-eqc/publications/statement-of-performance-expectations

Section 2 - Canterbury*

This section tracks the progress of outstanding claims arising from the Canterbury sequence of earthquakes 2010-11 ('Canterbury'). It shows how many claims have been reopened (inflow), how many claims have been resolved during the month (resolved), and how many are outstanding at the time of reporting (on hand). We also profile our remaining on hand claims by age, by complexity, by settlement pathway, and by reason for reopening the claim. This section also provides visibility on our progress to resolve claims in dispute (claims subject to legal proceedings or other dispute resolution pathways).

Government on-sold support package

This sub-section outlines our progress in the delivery of the Government on-sold support package, on behalf of the Government, to support owners of on-sold over-cap properties in Canterbury to access financial help to have their homes repaired.

Section 3 - Other Natural Disaster Events (Excluding Canterbury/Kaikōura)

This section covers all claims that are not related to the specific Canterbury and Kaikōura events. Here, we track our claims management progress by how many we have received during the month (inflow), how many we have resolved in the month (resolved), and how many are on hand (outstanding). The data in this section is organised by the type of natural disaster damage for which a claim may be lodged (namely earthquake, landslip, flood or storm damage). In this section we also profile our remaining on hand claims by damage type and age. We also report on any new natural disaster events that have occurred during the reporting period that have had an impact on claim inflow.

Claims subject to management under the Natural Disaster Response Agreement (NDRA)

Under the Natural Disaster Response Agreement (NDRA), which came into effect on 30 June 2021, customers now lodge their disaster claim directly with our insurer partners who manage the settlement process on behalf of EQC ('Insurer Managed'). However, EQC continues to directly manage historical claims ('EQC Managed') relating to damage pre 30 June.

Section 4 - Resilience

This section monitors the progression of EQC's contribution to reducing risk and building resilience to natural hazards in New Zealand. The section also monitors the perceptions of key stakeholders around the quality and relevance of the outputs of EQC's investment in research (usefulness, useability and use), our contribution to building resilience to natural hazards and the quality of our partnering in these areas. Monitoring also includes the public's perceptions of how we are doing with enhancing public understanding of natural hazard risk and our influence on the public to take action to reduce this risk. Reporting on progress will occur on a quarterly basis.

Section 5 - Customer Focus

This section monitors the quality of our customer focus through customers' satisfaction with their interactions with EQC. There are three key strands which align to the customer focus metrics in the SoPE 2020-21:

- 'Service Quality' of their overall claims experience and, for Canterbury customers, reflection on their most recent experience;
- 'Timeliness and quality of Complaints Resolution'; and
- 'Enduring settlements'.

The data comes from the customer satisfaction survey that TNS Kantar undertakes on our behalf each month. This section also summarises the volume of customer contacts by phone, email and post.

Note: Due to timing of the survey, the customer satisfaction results are reported a month in arrears.

Section 6 - Media

This section monitors the tone and impact of EQC's coverage in both traditional and social media. It keeps a year-to-date count of the number of media statements released by EQC, and also how many times EQC appeared in the media during the month (media articles). The section also provides a view on what's driving our media impact and the leading messages and themes shaped by these drivers in both media formats.

Section 7 - Official Information Act (OIA) Requests

This section monitors the number of OIAs we have received, completed and have remaining on hand at the end of the month. Our OIAs are divided into two types: those in which our customers' request information and/or supportive information from us on their claim (Customer OIA); and OIA requests that relate directly to EQC and/or operational activities (Organisational OIAs). Our compliance rate for both request types is monitored and reported here.

Section 8 - Privacy Breaches

This section provides a monthly update on EQC's compliance matters, in particular, the severity and nature of reported privacy breaches as well as any emerging themes.

Section 9 - HR Operations

This section tracks EQC's average annual leave balance, sick leave usage and annualised turnover, compares them to the corresponding Public Service average and provides visibility on what's influencing our averages and annualised turnover rate. This section also provides a view on headcount movement overlayed by claim population movement and a broad profile of our workforce, which is updated on a quarterly basis.

*The published report made available to the public excludes a section on Kaikōura has been excluded as it includes private commercially sensitive insurer data.

Output One - Recovery after an event

Output 1.1 - Settlement of the 2010-11 Canterbury earthquake sequence remedial claims

Output 1.1 is specifically focussed on providing service to EQC's customers with claims from the 2010-2011 Canterbury earthquake sequence, including claims EQC is managing on behalf of Southern Response Earthquake Services Limited (Southern Response). The measures address both the timeliness and customer focus of EQC's claims resolution.

The measures in this output class are a continuation from the 2020-2021 financial year. From 2021-2022, measures are likely to be re-evaluated to reflect the smaller number of claims and the different treatments required for them.

The threshold for customer satisfaction is lower for Canterbury claims than it is for other claims. This is because Canterbury claims often have long and complex histories, in part reflective of past processes that have now changed. Also, for this reason most of our customer focus measures look at a customer's recent experience to test the effectiveness of our continuous improvement initiatives.

Performance measures | Timeliness

Ref	Measure	Target	YTD Result	Progress - YTD	Status/Trend
1.1.1	Outstanding claims over six months old, on hand at 30 June 2021, are settled by 30 June 2022	75%	89%	0% 10% 20% 30% 40% 50% 60% 70% 80% 90% 100%	• •

Commentary:

In the FYTD, performance against SOPE measure 1.1.1 is tracking ahead of expected performance to meet target. To date, we have closed 441 (89%) of the 495 claims that were outstanding (over 6 months old) at 30 June 2021.

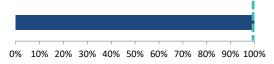

New claims opened or reopened³ between 1 January 2021 and 31 December 2021 1.1.2 80% 85% are resolved within 6 months4 0% 10% 20% 30% 40% 50% 60% 70% 80% 90% 100%

Commentary:

In the FYTD, performance against SOPE measure 1.1.2 is tracking ahead of expected performance to meet target. To date, 2257 (85%) of the 2659 in-scope claims that were reopened in January-October 2021 have been settled within 6 months of their reopened date.

The on-sold ex gratia package is administered in 1.1.3 accordance with the On-Sold Canterbury 100% **Properties Services Agreement**

Key performance measures outlined in the On-Sold Canterbury Properties Services A

Agreement	Standard	Result
pplication.	100%	100%
onth of receiving all required	100%	100%
ny Proportios Convicos Agraement	Achieved	Achieved

EQC will initiate direct contact with the Applicant within 10 Business days of receipt of the Application.	100%	100%
A decision on the outcome of the Application will be conveyed to the Applicant within one month of receiving all required documentation and reports.	100%	100%
EQC will provide reporting to the Treasury as specified in Schedule 4 of the On-Sold Canterbury Properties Services Agreement.	Achieved	Achieved
Applications for ex gratia payments will be assessed against the criteria specified in the On-Sold Canterbury Properties Services Agreement and a decision on the outcome of the Application will be conveyed to the Applicant within one month of receiving all required documentation and reports.	100%	100%

³The open claim has been resolved (closed) from the perspective of the business (EQC). An open claim may be classified as resolved where the customer has been asked to provide further information related to their claim (over a period) that has not occurred. This approach is consistent with that taken by the private insurers. To count as reopened, EQC needs to have triaged the request and accepted the possibility of further activity being required.

On track for delivery

⁴Does not include claims in litigation or where a customer appoints a third party to represent them.

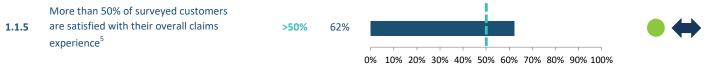

Output One - Recovery after an event (cont.)

Performance measures | Customer Focus

Commentary:

Under clause 6.6 of the Agreement relating to management of outstanding Southern Response earthquake claims, EQC must obtain Southern Response's written agreement prior to proceeding, where the Settlement Sum or Repair or Rebuild Sum exceeds the Cap by more than \$50,000.

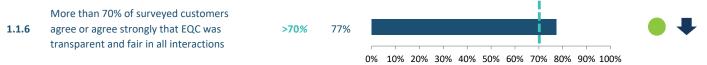

Commentary:

In the FYTD, performance against SOPE measure 1.1.5 is tracking ahead of expected performance required to meet target.

Note: Results are reported one month in arrears.

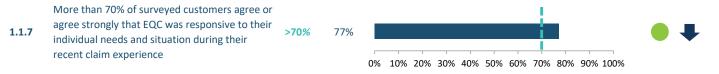

Reflecting on their most recent experience:

Commentary:

In the FYTD, performance against SOPE measure 1.1.6 is tracking ahead of expected performance required to meet target. This measure has slightly decreased from the 78% in March.

Performance measures | Customer Focus | Reflecting on their most recent experience

Commentary:

In the FYTD, performance against SOPE measure 1.1.9 is tracking ahead of expected performance required to meet target.

Note: Results are reported one month in arrears.

Commentary:

In the FYTD, performance against SOPE measure 1.1.10 is meeting expected performance required to meet target. Of all complaints received relating to Canterbury claims, 91% have been resolved within the target timeframe. Of the 6 complaints with the target close date of April 2022, 5 complaints were resolved within the target timeframe.

Commentary:

In the FYTD, performance against SOPE measure 1.1.11 is tracking ahead of expected performance to meet target. Of the 3334 in-scope claim closures between 01 January to 31 October 2021, 85 (3%) have since been reopened.

⁶Previously this measure was broken down into three categories depending on claim complexity.

⁷This will not include claims re-opened for purposes such as minor works or for making a payment or insurer facilitation).

Output One - Recovery after an event (cont.)

Output 1.2 - Claims Relating to Natural Disaster Events (excluding Canterbury)

Output 1.2 is focussed on claims unrelated to the 2010-2011 Canterbury earthquake sequence. These measures address the speed, quality and cost of EQC's claims resolution. From mid-2021, these measures will relate to the services provided by private insurers on EQC's behalf.

Output 1.2 | Performance measures | Timeliness

Ref	Measure	Target	YTD Result	Progress - YTD	Status/Trend
1.2.1	Claims lodged between 1 January 2021 and 31 December 2021 are resolved within six months	90%	91%	N=2833, 91% N=1961, 100% N=872, 72% 0% 10% 20% 30% 40% 50% 60% 70% 80% 90% 100% Total EQC Managed Insurer Managed	• \leftrightarrow
1.2.28	Claims that have not been settled within six months of lodgement are settled within 90 working days of the assessment phase being completed	90%	88%	N=32, 88% N=27, 100% N=5, 20% 0% 10% 20% 30% 40% 50% 60% 70% 80% 90% 100% Total EQC Managed Insurer Managed	• •

Commentary:

In the FYTD, performance against SM 1.2.1 is on track to meet target. To date, 2584 claims of the 2833 in-scope claims lodged between January-October 2021 were resolved within 6 months. Progress on insurer-managed claims for this measure are being monitored and discussions ongoing. Guidance continues to be provided on the requirement for insurers to forward plan their site services to meet expected timeliness standards for claim progress.

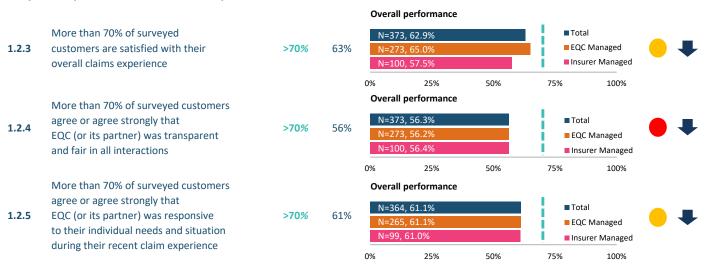

In the FYTD, performance against SM 1.2.2 is now below expected performance required to meet target. For EQC managed claims, all 28 in-scope claims not settled within six months of lodgement, have subsequently been settled within 90 working days of the assessment process being completed. There were 4 insurer managed claims within scope this month. One claim passed this measure and 3 failed, with the claim remaining open or closed more than 90 days after the assessment phase.

A combination of EQC managed and Insurer Managed claims are now used for measures 1.2.1 and 1.2.2 - the NDRM measures are included from January 2022 (6 months after commencement of the NDRM on 30 June 2021).

Explained: 'Insurer Managed' and 'EQC Managed' claims

Under the NDRM, customers now lodge their disaster claim directly with our insurer partners who manage the settlement process on behalf of EQC ('Insurer Managed'). EQC continues to directly manage historical claims ('EQC Managed') relating to damage pre 30 June.

Output 1.2 | Performance measures | Customer Focus

Commentary:

In the FYTD, performance against SOPE measures (SM) 1.2.3-5 continue to track behind expected performance required to meet target, with SM 1.2.4 now rated as 'highly unlikely to be achieved'. EQC has investigated themes which are related to Covid delays and the preponderance of weather-related events (with land cover being less well understood).

As we gather more insights we continue to work with our insurer partners on a monthly basis. This includes analysing overall themes and working with individual insurers on improving specific areas. EQC is also considering what customer education initiatives it can develop on land cover.

Notes:

- 1.) Results are reported one month in arrears.
- 2.) Insurer managed performance began contributing to results for SMs 1.2.3-5 from October 2021.

⁸The measure has been adjusted to reflect the small number of claims that now fall within this category.

Key:

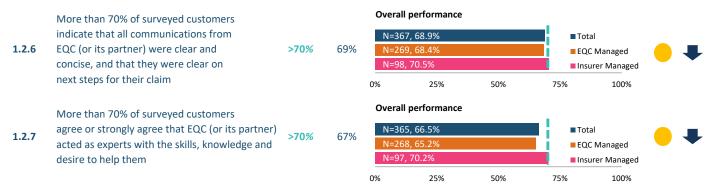

Target highly unlikely to be achieved

Output One - Recovery after an event (cont.)

Output 1.2 | Performance measures | Customer Focus

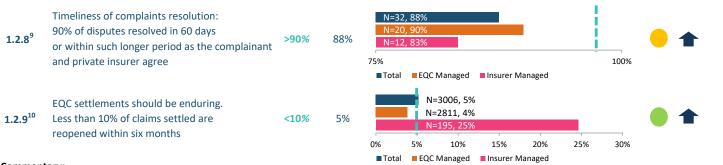

Commentary:

In the FYTD, performance against SOPE measures 1.2.6-7 is tracking behind expected performance required to meet target, however the YTD results for both measures remains within proximity to target.

As we gather more insights we continue to work with our insurer partners on a monthly basis. This includes analysing overall themes and working with individual insurers on improving specific areas.

- 1.) Results are reported one month in arrears.
- 2.) Insurer managed performance began contributing to results for SMs 1.2.6-7 from October 2021.

Commentary:

In the FYTD, performance against SM 1.2.8 is now tracking behind expected performance required to meet target. Of all in-scope claims for this measure, 90% of EQC-managed claims have been resolved within 60 days. Only a small volume of complaints have been received to date relating to Insurer managed claims, with 83% meeting the 60 day timeframe for resolution.

Note: Volatility of results for this measure due to low volumes of complaints.

In the FYTD, performance against SM 1.2.9 is on track to meet target. For this measure, 108 of the 2811 in-scope EQC managed claim closures between 01 January 2021 to 31 October 2021 were reopened within 6 months of closure (4%). For in-scope insurer managed claims, 48 of the 195 claims for the relevant period were reopened within 6 months of closure (25%). However, based on insurer feedback, many of the claims were reopened for administrative purposes and should be excluded from this measure. EQC is aware that there are data constraints and is working with the insurer partners to understand how we can report the true position.

Explained: 'Insurer Managed' and 'EQC Managed' claims

Under the NDRM, customers now lodge their disaster claim directly with our insurer partners who manage the settlement process on behalf of EQC ('Insurer Managed'). EQC continues to directly manage historical claims ('EQC Managed') relating to damage pre 30 June.

Performance measures | Quantity

Commentary:

As reported last month, we are still unable to report on progress given the low volume of settled claims.

⁹Excludes complaints that fall into the external dispute resolution process to align with Fair Insurance Code terminology. ¹⁰Measure excludes administrative reopens.

Target highly unlikely to be achieved

Output Two - Resilience

Dof

Output 2.1 - A resilience programme that facilitates improved analysis and public understanding of natural hazard risk

YTD

Our Resilience output class focusses on investing in science, data, loss modelling, and public education to support risk-informed decision making. With strong reciprocal relationships, we disseminate this knowledge and tools to people who can make a difference - policy makers, planners, key professions, and the public.

Ref Measure Target Progress - YTD Status/Trend

YTD

EQC is able to demonstrate, through contingency planning and scenario testing,

4.1 that its event response model has capacity to manage 100,000 claims per year by 30 June 2022

as per neasure

EQC has contingent capacity to scale to 100,000 claims per year through the Natural Disaster Response Model utilising Insurers and their contracting arrangements with Third Party Administrators (TPAs).

Comment

To validate this scalability, EQC reviewed Insurer event response and surge plans which outline how Insurers will scale to achieve capacity beyond what was achieved in Kaikōura. EQC is confident that there is contingent capacity to scale to 100,000 claims per year based on Insurers planned approach to surge. This is based primarily on the Insurers and TPA's to leverage significant national and international resources before needing to recruit. Being able to surge to appropriate staff levels to manage customer claims is the main driver to achieving this measure. \$9(2)(b)(ii)

To support co-ordinated insurance response and recovery activities. By 30 June 2022 EQC (with its partners) has developed two event response strategies that cater to a range of natural disaster perils that EQC covers

Scenarios proposed for this measure, include a Hawkes Bay earthquake and Alpine Fault earthquake. Work to develop the strategy for the Hawkes Bay EQ scenario concluded in November 2021. Planning for the Alpine Fault EQ scenario commenced in late January 2021.

Comment

Joint workshops between EQC, ICNZ, and Insurers to develop a Hawke's Bay earthquake event response strategy concluded in November 2021. This was socialised with Natural Disaster Response Model governance groups and was noted to the EQC Board in the April 2022 EQC Board meeting. EQC is planning for socialisation of this event response strategy with wider stakeholders, including the Minister and Local MP's, from around May 2022.

Planning for the next event response strategy, an Alpine Fault M8.1 earthquake, commenced in late January 2022 with joint workshops through February - April 2022. A draft Event Response Strategy has been completed and is being circulated for final drafting comments and changes. Natural Disaster Response Model governance endorsement is expected in late May 2022 and EQC Board noting in June 2022.

 Systems are established and available to receive agreed data from private insurer partners under the insurer response model agreement

The Data Hub and Exchange are functional and working as expected. EQC continues to work with insurers to improve data quality and mature and automate processes.

Performance measures¹⁹ | Quality

Moderate - and high-risk issues identified through the Insurer Response Model Assurance Framework have an agreed and documented action plan to address those issues (including timeframes), and relevant actions have been completed within the agreed timeframes

Progress against this measure remains in line with expected performance required to meet target with the majority of insurers standing at 100% compliance for both the month of April and Year to Date.

EQC implements recommendations 5.1.3
4.6 and 6.1.3 from the 2020 Public Inquiry by
24 December 2022

100%

The two recommendations referenced remain on track for delivery by the due date

Comment

Progress against SOPE measures (SMs) 4.5-6 shows that EQC has implemented or substantively implemented 36 of the 41 recommendations. Of the three remaining recommendations expected to be implemented by June 2022, one is on track and the remaining two have dependencies as follows; one recommendation cannot be implemented until the Natural Hazards Insurance Bill is passed, which is expected to be later this year; and one is dependent on government decisions on another recommendation. Two further recommendations (SM 4.6) are on track for completion by December 2022.

Section 2 - Canterbury

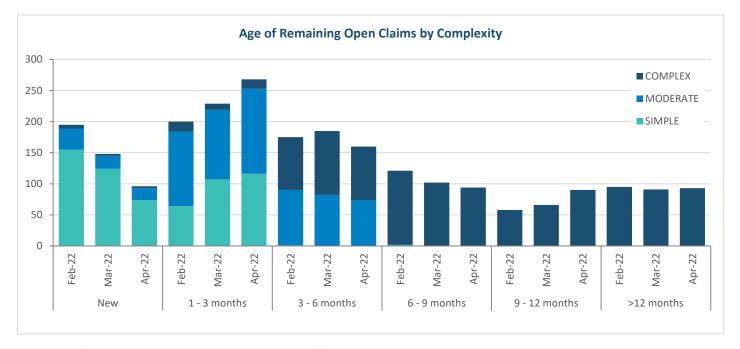

During April, 263 claims were resolved, offset by inflow of 243 claims. At month end we have 801 open Canterbury claims on hand, a reduction of 20 since the end of March.

April saw a decrease in open Canterbury Event Sequence claims to 801 (vs. 821 at March end). Inflow this month was noticeably lower with a number of public holidays occurring during this time. From a complexity viewpoint, 85% of inflow received this month were 'simple' claims ie. all information is at hand to settle the claim. Over the month, our Claims Assurance team was able to address 35% of customer enquiries up-front ie. claim closed with no further action required. This rate of up-front resolution is consistent with previous months.

In line with our **Aged Claims Strategy**, the focus, since July 2021, remains the continued reduction of both our 'aged claims' population (claims older than 12 months) and its proportional representation within the overall population of open Cantebury claims. This month our aged claims population increased to 93 (vs. 91 last month). All efforts continue to be made to ensure that there are no delays, that are within the control of EQC, in the progression of these claims.

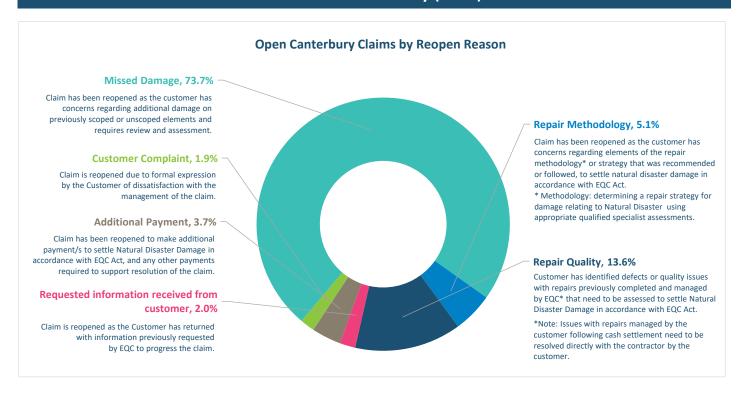

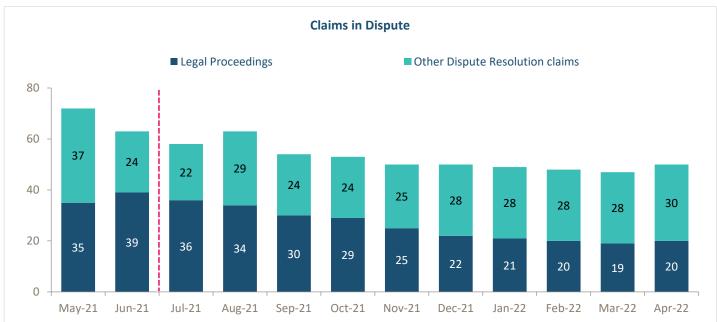

The 263 claims resolved this month includes 7 claims open at 1 April, that are now subject to an application for Government support for repair of on-sold over cap properties ('on-sold claims', an open total 1,611 of which are excluded). A further 4 SRES MOU claims were settled.

Resolution of aged claims continues to be a key priority for our settlement teams. During April there was a 2% increase in claims aged > 12 months (91 up to 93). Though claims aged 9 - 12 months increased by 36% (66 up to 90), claims aged 3 - 9 months reduced by 21% (287 down to 254). Claims aged < 3 months also reduced, by 3% (377 down to 364).

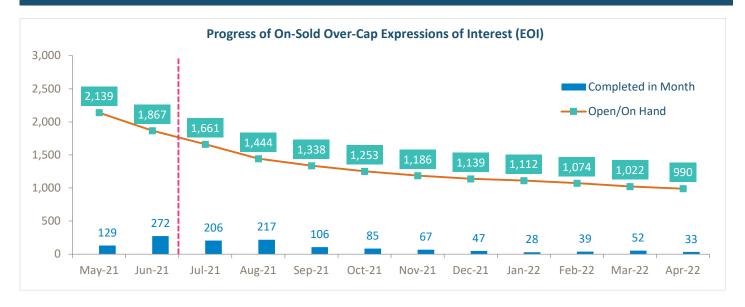

Section 2 - Canterbury (cont.)

As at 30 April, 20 Canterbury claims remained subject to legal proceedings, up from 19 at the end of March. Other claims with Dispute Resolution teams increased to 30, up from 28 last month.

Section 2 - Canterbury (cont.)

Applications (expressions of interest - EOIs) for government support to repair On-Sold Over-Cap properties closed in October resulting in nil inflow from Nov-20.

The following chart plots the flow of On-Sold EOIs through the value chain. To date, we have completed the assessment of 4,983* applications of which:

- 1,197 have received an On-Sold settlement agreement or have been resolved without the need to pay Crown funds ('Agree & execute settlement agreement' (523) + 'Monitor and Report' (674);
- 690 have been transferred to EQC operations to be managed as these applications are not likely to exceed the EQC cap, or do not fit the On-Sold eligibility criteria; and
- 1,273 have been closed due to insufficient information following a campaign to contact homeowners requesting additional information customer to assess their eligibility and demonstrate they have additional damage.

We currently have 990 EOIs on hand that are being reviewed for eligibility or are being managed through our On-Sold assessment/ settlement process ('Work in Progress'), including 116 Awaiting Agreements with Customers.

*These numbers exclude applications with status of 'Awaiting Agreement – Customer', as these applications are now being treated as WIP (Agree and execute settlement agreement)

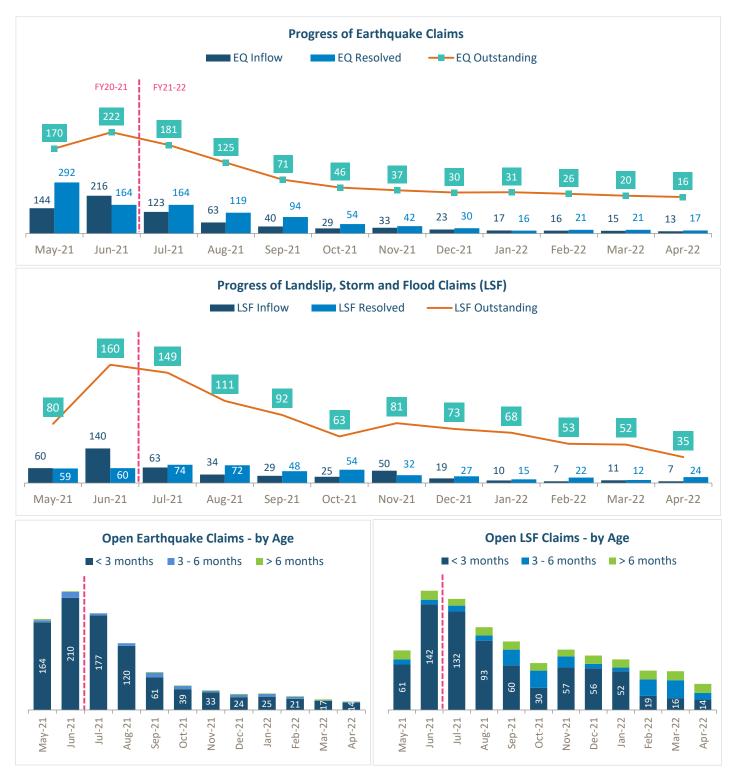

SOW - Scope of Works

Section 3 - Other Natural Disaster Events (Excluding Canterbury/Kaikōura)

This section provides details of claims that did not result from the Canterbury or Kaikōura earthquake events.

We recorded inflow of 20 new and reopened claims in April, down from 26 in March. Of this, 65% was attributable to earthquake (EQ) and 35% to Landslip, Storms and Flood claims (LSF).

Note: Inflow refers to claims lodged as well as reopened

Claims subject to management under the Natural Disaster Response Model (NDRM)

As at 30 April 2022, we have received 1986 Insurer managed claims. Over 77% of these claims are Landslip, Storm and Flood damage claims (LSF) including over 300 LSF related claims occurring on 16-18 July centred in the Wellington and Tasman areas.

April proved to be a quiet period with no significant claim generating events occurring during this time. As a result, there were a total of 20 claims reported, comprised of 8 EQ and 12 LSF related claims. From a claim generation perspective, the LSF claims were largely in the Northeast of the North Island regions, triggered by the remnants of cyclone Fili. The only notable EQ event felt during the month was a moderate M:5.0 EQ felt near Arthur's Pass in the South Island.

Section 4 - Resilience

Progress summary

On our Resilience Three Year Priorities (2019-22)

Change: Reporting on the progression of our Resilience Three Year Priorities has shifted to a quarterly update:

We've adjusted the frequency of our progress reporting from monthly to quarterly. This shift is to take into account that the nature of the work undertaken to progress our Resilience Three Year Priorities is more suited to quarterly progress reporting. Our next quarterly update will be provided in the EQC Performance Dashboard - June 2022. The following priorities are what we'll be reporting progress on each quarter.

A renewed focus on the strategic value of Data and information

Section 5 - Customer Focus

Under the Natural Disaster Response Agreement (NDRA), which came into effect on 30 June 2021, customers now lodge their disaster claim directly with our insurer partners who manage the settlement process on behalf of EQC ('Insurer Managed' claims). EQC continues to directly manage historical claims ('EQC Managed' claims) relating to damage prior to 30 June 2021.

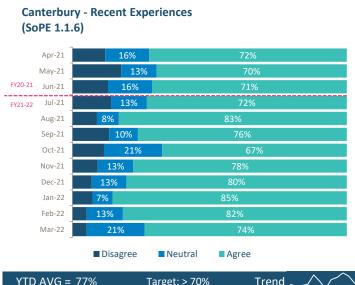

'EQC Managed' claims

Overall, customer satisfaction with EQC's service amongst our Canterbury customers continues to trend upwards. Satisfaction amongst our customers impacted by Other Natural Disaster Events has held relatively steady between quarters, however interpretation of monthly results should still be treated with caution due to the small sample sizes.

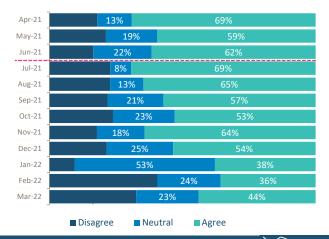

'Insurer Managed' claims

We are now six months into surveying customers insured under the insurer managed claims model, however sample sizes still remain low. We expect the volumes to increase significantly in the coming months.

Overall claim experience

Survey question
'How satisfied were you with the overall quality of the service you received making the claim?'

Section 5 - Customer Focus (cont.)

Overall claim experience by event response

Our Canterbury customers

An upward trend in satisfaction with the overall experience (SM 1.1.5) amongst customers is evident.

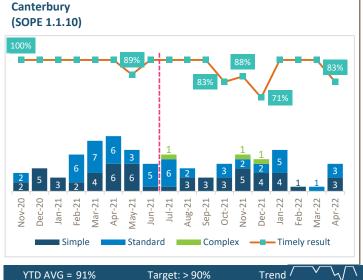

Satisfaction with recent* experiences (SM1.1.6-9) amongst customers remains solid. As a result YTD performance continues to track ahead of expected performance required to meet their respective targets.

*Recent experience relates to the last six months.

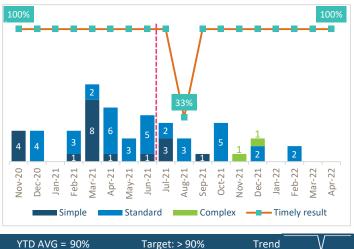

Our Natural Disaster Events (NDE) customers

Satisfaction amongst customers with their overall experience (SM 1.2.3) has been stable for some time. However, there was a notable decline in March results for this measure. Satisfaction with recent experiences declined across all related measures (SMs 1.2.5-7), with the exception of measure, transparent, fair & reasonable interactions (SM 1.2.4), which had already experienced a decline over recent months. Monthly results should still be treated with

Timeliness of complaint resolution

Natural Disaster Events (Excl. Canterbury) (SOPE 1.2.8)

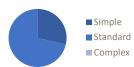

Progression of EQC-managed customer complaints

Complexity of open complaints

Target: > 90%

We received inflow of 3 new complaints in April offset by resolution of 2 complaints. This left 7 open complaints on hand at month end, an increase of 1 claim from the previous month.

Two of the 7 complaints open at month end were simple complexity, 5 were standard, and there were no complex complaints.

Of the open complaints, 5 were service related, and 2 were process related.

EQC Performance Dashboard - April 2022

Section 6 - Media (traditional)

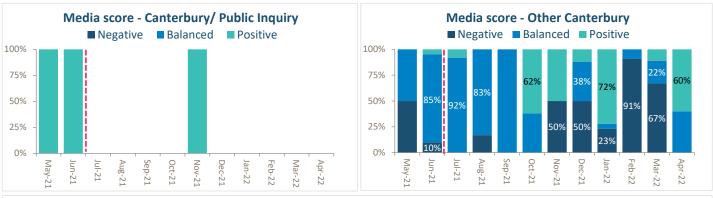

Across the month, EQC was mentioned in 52 traditional media reports, representing a 24% decrease from March coverage (68 articles). Just over half of our coverage was positive in tone, with no negative articles identified this month. While there was no negative coverage this month, the proportional increase of neutral coverage this month resulted in a dip in our Media Impact Score (MIS) to 1.9 (vs. 2.4 last month). Research was again the most prominent theme in EQC coverage this month.

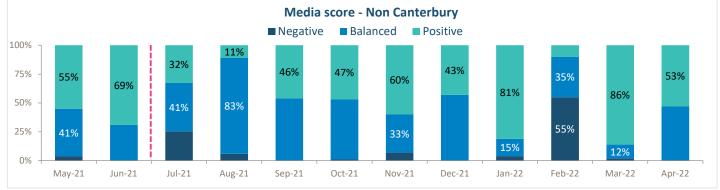

Positive coverage this month included reports on EQC's public education campaign, 'Home Safe Home?', aimed at encouraging home buyers to consider how a property might be affected by natural hazards; and the appointment of Chris Black and Ruth Dyson as chair and deputy chair of EQC.

Neutral reporting included mentions of EQC within discussion about flood risks, with the Dominion Post noting that research group Motu found EQC payouts for landslips, storms or floods "could increase by 8 per cent in the next two decades".

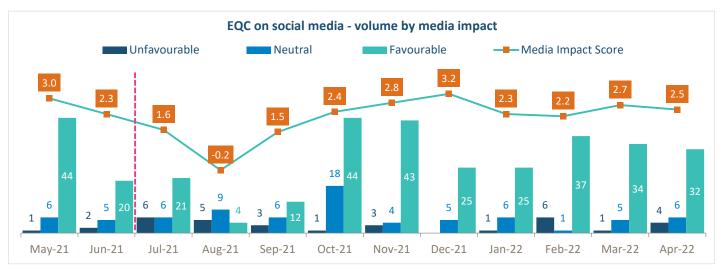

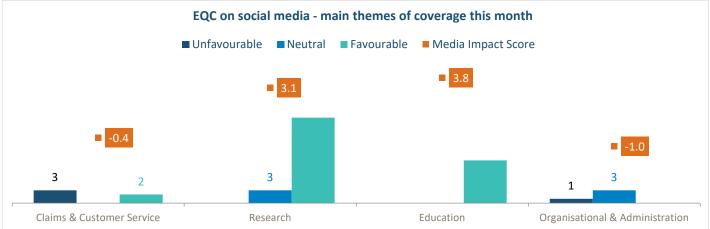

Section 6 - Media (social)

This month, the volume of social media mentions increased slightly by 5%, to a total of 42 posts. Just over three-quarters of coverage was positive in tone, while there was a proportional increase in negative social media posts, up 7% on last month. The proportional increase in negative posts led to a slight decline in our MIS for social media to 2.5 (vs. 2.7 last month). Research was the main theme within social media, discussed in 55% of coverage.

Positive coverage this month included posts about the appointment of Dr Ken Elwood as chief engineer in a dual-agency position alongside MBIE; retweets of Geonet's posts about the EQC ad campaign, 'After Quake Double Take'; and users highlighting Dr Carolyn Boulton's research into greywacke rock and earthquakes.

Conversely, negative posts included a Facebook post by Star News Christchurch, which shared an Otago Daily Times article on a bill designed to make life easier for people affected by major disasters.

As with traditional media coverage, research was the leading theme of social media posts - discussed in 55% of coverage. This included a post by NIWA, thanking Catalyst for profiling its work with GNS Science and EQC in developing RiskScape software to be used for risk analysis.

EQC's Twitter handle was the top poster in April, sharing 10 items at an average MIS of 3.8. The post most engaged with featured EQC's 'After Quake Double Take' campaign.

Understanding the Media Impact Score

The change in metric from 'Average Favourability' to 'Media Impact Score' (MIS) is based on ensuring that the methodology we employ more accurately reflects the way audiences consume media and engage with digital news and social media.

The new methodology combines **content analysis** (what the coverage says, the tone, topics, and messaging) with **salience** (its importance/ influence, by taking into account the audience size and potential reach of each piece of coverage, our positioning and prominence within that coverage, and the level of engagement for social media) to assess **impact**.

Our score sits on a scale of -10 to 10, with 0 being the neutral or balanced point.

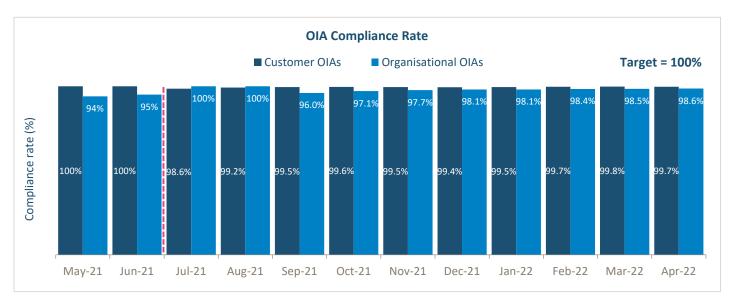

Section 7 - Official Information Act (OIA) Requests

This month, our Customer OIA Team received 116 new OIA requests (vs. 159 in Mar-22). Coupled with the 160 requests on hand from last month and resolution of 156 requests this month, the team have 120 requests on hand at month end.

This month, our Government Relations Team received 3 new high level OIA requests (vs. 7 in Mar-22). Coupled with the 7 requests on hand from last month and 7 completed requests this month, the team have 3 requests on hand at month

This month our Customer OIA Team achieved a 99.3% compliance rate. As a result, the YTD compliance result dipped slightly to 99.7%.

During the same period, the YTD compliance rate of our Government Relations Team rose slightly to 98.6% for organisational/ high level OIA requests following a month of 100% compliance.

Section 8 - Privacy Breaches

Four privacy breaches (vs. 5 in Mar-22), all rated as being of minimal severity, were recorded by the Risk and Compliance Team this month. The reported breaches were assessed against the Government Chief Privacy Officer (GCPO) categorisation system and no serious harm appears to have arisen as they are all considered contained. In the FYTD 21-22, we are tracking at 18% less privacy breaches reported compared to the corresponding period in FY20-21.

Privacy breaches

Breaches reported this month relate to: 'Incorrect email address used' (2); 'Wrong document sent' (1); and 'Incorrect document content' (1). All breaches have been contained and no harm is believed to have arisen.

Breach severity categories

Following the new Privacy Act 2020, which came in to effect on 1 December 2020, all breaches are now assessed against the Government Chief Privacy Officer Tool (GCPO). The GCPO categorisation system allows for transparent internal and external reporting on privacy incidents, and allows for benchmarking and direct comparisons of reported incidents across government agencies. The new rating categories are: 'Minimal', 'Minor', 'Moderate', 'Significant', and 'Severe'.

Below is an explanation of each rating:

Severe	Significant	Moderate	Minor	Minimal
Breach of sensitive or highly sensitive information with serious potential or actual harm. Indication of systemic failure that could undermine government systems. The incident will significantly affect the reputation of and undermine trust and confidence in the public sector. The incident will get ongoing media coverage.	Information is sensitive or highly sensitive with serious potential or actual harm. There will be measurable and ongoing negative impact on individuals and/or agencies with potential long-term loss of trust and confidence in the agency. Possible indication of systemic failure that could undermine government systems. The incident will get ongoing media coverage.	Information is not sensitive or highly sensitive. Potential or actual harm is more than minor. Customers and clients may stop using, or be reluctant to use, a service or delivery channel. The incident may get media attention or cause reputational risk due to the number of people rather than the information involved.	Small number of people are affected with minor potential or actual harm. Little or no indication of systemic problems. The incident may get short-term minor or isolated media interest.	Small number of people are affected with little or no potential or actual harm. Little or no indication of systemic problems. The incident most likely won't get media interest.

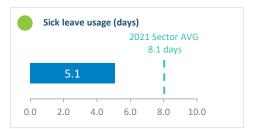

Section 9 - HR Operations

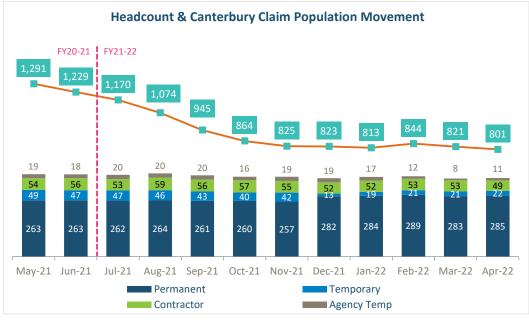

Across April, our permanent workforce headcount increased by 2, while our temporary headcount rose by 1 over the month. During the month, our average annual leave balance rose to 12.7 days (vs. 12.2 in Mar-22), remaining below the 2021 Public Sector ('sector') average of 17.2 days. Average sick leave usage also increased slightly from last month by 0.3 to 5.1 days and continues to remain below the sector average of 8.1 days. Meanwhile, annualised turnover ('voluntary turnover') increased to 14.8% (vs. 13.8% in Mar-22), remaining above the sector average of 10.5%.

HR Ops at a glance - EQC's performance against Public Service Sector Averages

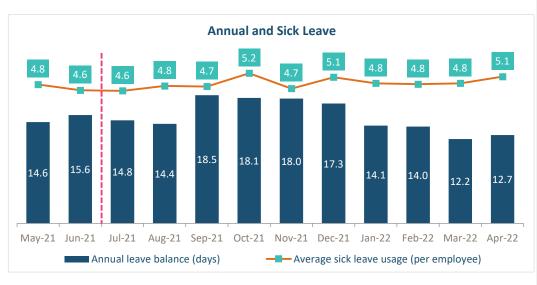

Over the month, our permanent employee population has increased by 2 while our temporary employee population also increased by 1. We continue to see many opportunities in the employment market which remains competitive in which employees are starting to move into other organisations in search of a different challenge.

As reported above, our average annual leave balance rose to 12.7 days (vs. 12.2 in Mar-22), which remains below the 2021 public sector average of 17.2 days.

In the same period, average sick leave also increased slightly from last month by 0.3 to 5.1 days against a 2021 public sector average of 8.1 days.
